WS SLIDE TABLES

Discontinued

Caution

Before use, be sure to read the "Safety Precautions" on p. 45.

The slide table now features a new style, complete series!

■ Cylinder thrust (Operating pressure 0.5MPa, push side) ^{Note 1}

AWS6: 28N [6.3lbf.], AWS10: 78.5N [17.6lbf.],
 AWS16: 201N [45.2lbf.], AWS20: 314N [70.6lbf.],
 AWS25: 490.5N [110.3lbf.]

● Pitching ^{Note 2}

Allowable bending moment
 AWS6 × 50: 4N·m [3.0ft·lbf]
 AWS10 × 100: 16N·m [11.8ft·lbf]
 AWS16 × 100: 17N·m [12.5ft·lbf]
 AWS20 × 100: 30N·m [22.1ft·lbf]
 AWS25 × 100: 42N·m [31.0ft·lbf]

● Yawing ^{Note 2}

Allowable bending moment
 AWS6 × 50: 4N·m [3.0ft·lbf]
 AWS10 × 100: 16N·m [11.8ft·lbf]
 AWS16 × 100: 17N·m [12.5ft·lbf]
 AWS20 × 100: 30N·m [22.1ft·lbf]
 AWS25 × 100: 42N·m [31.0ft·lbf]

Notes: 1. For details of cylinder thrust, see p.907.
 2. For details of allowable bending moment, see p.904.

■ Two guides for high rigidity (One guide for $\phi 6$ [0.236in.])

Rigidity-emphasizing design uses two linear guides to achieve a large allowable moment.

■ Twin rod for high thrust

Use of a twin rod cylinder obtains double the thrust of conventional cylinders, and combines with the two guides to achieve high load transfer in the vertical direction.

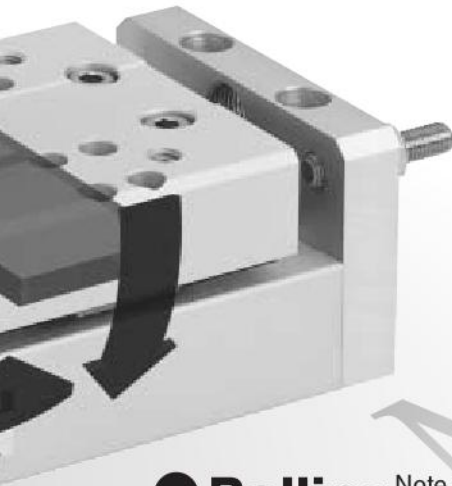

■ Locating dowel pin holes & Heli-sert inserted mounting threads

The locating dowel pin holes have been prepared to improve repeatability of mounting and dismounting. Moreover, the mounting threads with heli-serts for strength available.

High thrust (Twin rod)+ High rigidity (Two guides) Note: For $\phi 6$ [0.236in.], one guide.

for a more

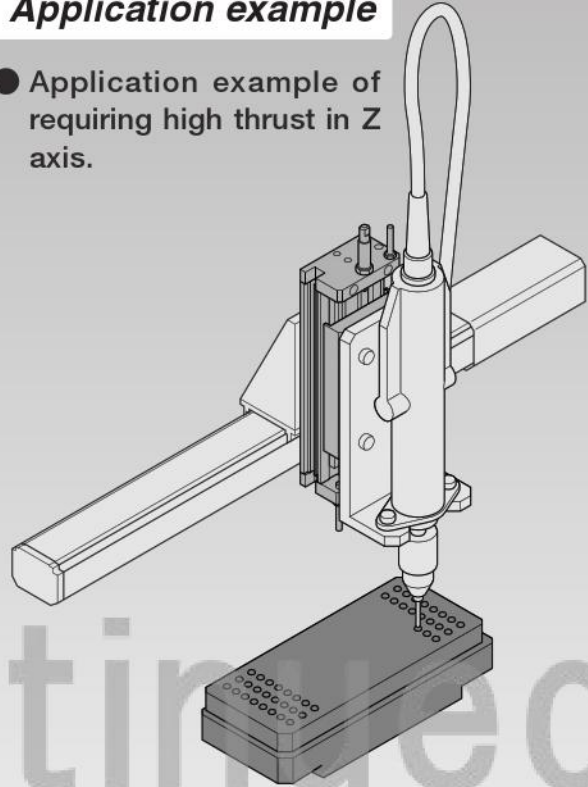

● Rolling Note 2

- Allowable bending moment
- AWS6: 1N·m [0.7ft·lbf]
 - AWS10: 7N·m [5.2ft·lbf]
 - AWS16: 9N·m [6.6ft·lbf]
 - AWS20: 16N·m [11.8ft·lbf]
 - AWS25: 20N·m [14.8ft·lbf]

Application example

- Application example of requiring high thrust in Z axis.

WS SLIDE TABLES

■ With shock absorber (Optional)

A fixed absorption capacity type shock absorber that improves repeatability at the end of the stroke, and reduces shocks and noise, is optional.

■ Embedded type sensor switch and piping ports at one body end

Embedded type sensor switch does not protrude from the body. In addition, concentration of all piping ports at one body end allows wiring and piping connections in a single direction.

* Sensor switch is optional.

Safety Precautions (WS Slide Table)

Warning

Listed below are safety precautions specifically for the WS Slide Table. For general safety precautions, be sure to read p.45.

- Do not put your fingers into the space between the side plate and the table. Because fingers could be trapped between the side plate and the table during operation, never put your fingers into the gap. Actuator's thrust is large, and serious personal injury could occur.

Handling Instructions and Precautions

General precautions

Piping

1. Always thoroughly blow off (use compressed air) the tubing before connecting it to the WS slide table. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
2. When screwing piping or fittings into the WS slide table, tighten to the appropriate tightening torque shown below.

Bore size mm [in.]	Connecting thread	Tightening torque N·cm (kgf·cm) [in·lbf]
6 [0.236]	M3×0.5	59 {6} [5.2]
10 [0.394]	M5×0.8	157 {16} [13.9]
16 [0.630]		
20 [0.787]		
25 [0.984]		

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of 40 μm or less) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically. Collected liquid or dust entering the cylinder may cause improper operation.

Lubrication

1. The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.
2. Apply lithium soap-based grease on the raceway surface of the track rail in the guide portion every 6 months or every 300km [186mi.] of traveling distance.

Atmosphere

If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.

Discontinued

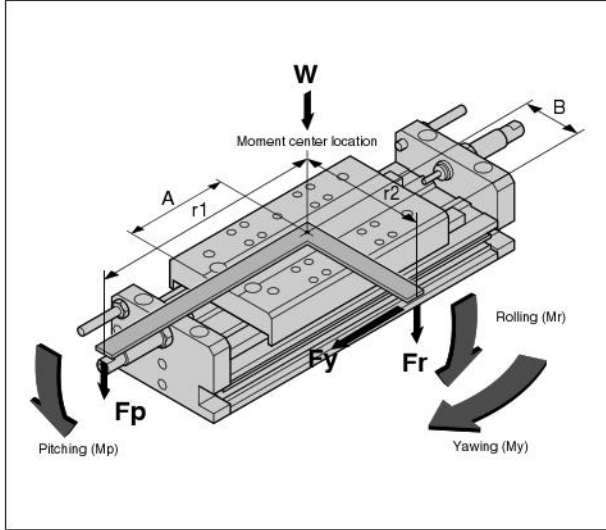

Handling Instructions and Precautions

Mounting and adjustment

Allowable load and moment

Although the WS slide table can be used with directly applying load, make sure that the load and moment do not exceed the values in the table below.

Pitching moment: $M_p = F_p \times r_1$ (N·m)
 Rolling moment: $M_r = F_r \times r_2$ (N·m)
 Yawing moment: $M_y = F_y \times r_2$ (N·m)
 Maximum load capacity: W (N)

Allowable bending moment

Allowable bending moment	Stroke mm	25	50	75	100~150
		M_p (Pitching)	AWS6	2.0 [0.20] [1.5]	4.0 [0.41] [3.0]
M_y (Yawing)	AWS10	—	7.0 [0.71] [5.2]	12.0 [1.22] [8.9]	16.0 [1.63] [11.8]
	AWS16	—	9.0 [0.92] [6.6]	13.0 [1.33] [9.6]	17.0 [1.73] [12.5]
	AWS20	—	15.0 [1.53] [11.1]	23.0 [2.35] [17.0]	30.0 [3.06] [22.1]
	AWS25	—	18.0 [1.84] [13.3]	30.0 [3.06] [22.1]	42.0 [4.28] [31.0]
M_r (Rolling)	AWS6	1.0 [0.10] [0.7]	—	—	—
	AWS10	7.0 [0.71] [5.2]	—	—	—
	AWS16	9.0 [0.92] [6.6]	—	—	—
	AWS20	16.0 [1.63] [11.8]	—	—	—
	AWS25	20.0 [2.04] [14.8]	—	—	—

Note: The allowable bending moment in the rolling direction does not change with the stroke.

Maximum load capacity

Model	W Maximum load capacity	Without shock absorber N [kgf] [lbf.]	With shock absorber N [kgf] [lbf.]
AWS6	—	5 [0.5] [1.1]	15 [1.5] [3.4]
AWS10	—	30 [3.1] [6.7]	50 [5.1] [11.2]
AWS16	—	40 [4.1] [9.0]	80 [8.2] [18.0]
AWS20	—	60 [6.1] [13.5]	120 [12.3] [27.0]
AWS25	—	80 [8.2] [18.0]	200 [20.4] [45.0]

Caution: The moment including the inertial force generated when the load is moved or stopped must not exceed the values in the above table.
 Keep the load and speed within the specification range.

Moment center location

Connection Port and Moving Direction of the Table

- The table moves in the direction of **R** when air is supplied to **N** port.
- The table moves in the direction of **L** when air is supplied to **P** port.

Plate End Eccentricity (Reference Value)

Discontinued

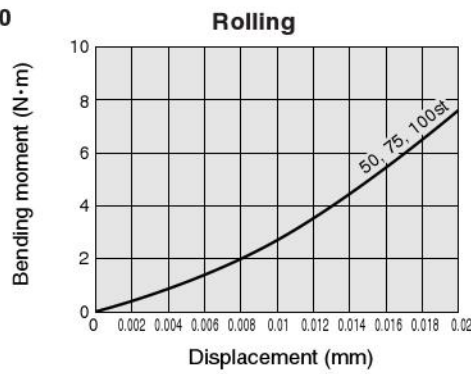

Handling Instructions and Precautions

■ Plate end eccentricity (Reference value)

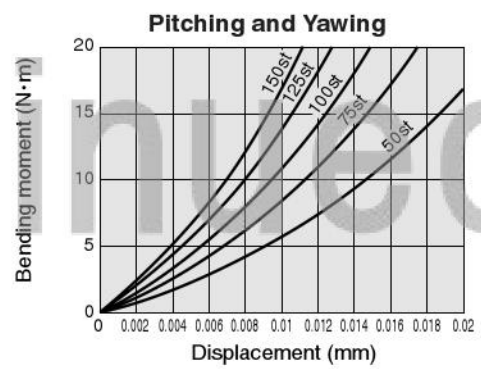

● AWS6

● AWS10

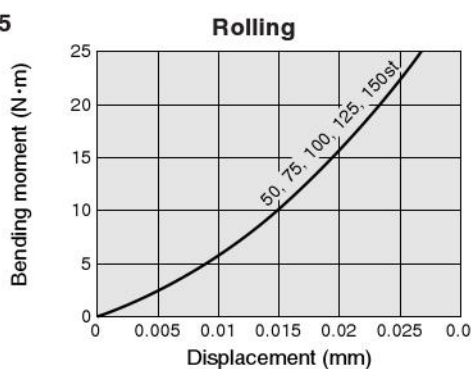

● AWS16

● AWS20

● AWS25

1N·m = 0.7376ft·lbf, 1mm = 0.0394in.

Mounting

Piping

1. If using the WS slide table without the shock absorber, always install an external shock absorbing device.
2. Because the hexagon nut for the stopper bolt is only temporarily tightened at shipping, be sure to tighten and secure it in place at time of use.
3. While any mounting direction of the WS slide table is allowed, mounting surface should always be flat. (Recommended flatness: Within 0.1mm/500mm [0.004in./19.69in.]) Twisting or bending during the mountings may disturb the accuracy and may also result in air leaks or improper operation.
4. Caution should be exercised that scratches or dents on the mounting surface of WS slide table may damage its flatness.
5. Take locking device or anti-looseness measures when shocks or vibrations might loosen the bolts.

Stroke adjustment method

The stroke of the WS slide table can be adjusted by screwed depth of the stopper bolt, as follows:

AWS6, 10 +2~-18mm [+0.08~-0.71in.]
(One side: +1~-9mm [+0.04~-0.35in.]

AWS16 +2~-28mm [+0.08~-1.10in.]
(One side: +1~-14mm [+0.04~-0.55in.]

AWT20, 25 +2~-26mm [+0.08~-1.02in.]
(One side: +1~-13mm [+0.04~-0.51in.]

- ① Loosen the hexagon nut which is securing the stopper bolt.
- ② Adjust the position of the stopper bolt by turning the hexagon socket hole of the stopper bolt with a hexagon bar wrench.
- ③ When the position is determined, secure the hexagon nut in place by tightening it.
- ④ For the slider with shock absorber, adjust the shock absorber position, as well. Keep the clearance between the table and shock absorber within range of 0~0.5mm [0~0.020in.]. Adjustment over 0.5mm [0.020in.] clearance will result in reduction of shock absorbing capacity.

Tighten the hexagon nut for mounting the stopper bolt to the tightening torques shown in the table below. Torques in excess of these values can damage the threads.

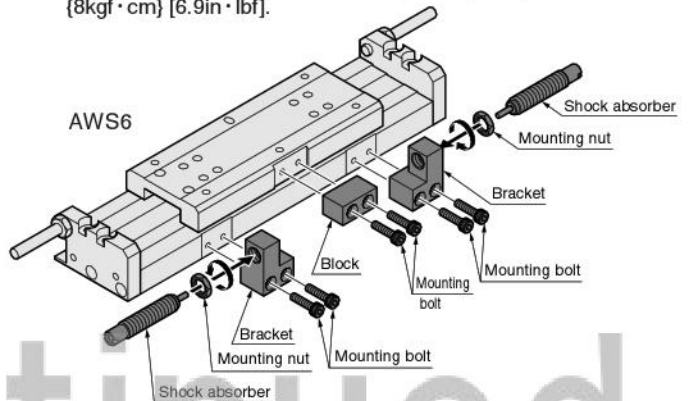

Model	Tightening torque N·cm [kgf·cm] [in·lbf]	Mounting nut
AWS6	137 [14] [12.1]	M4×0.7
AWS10	137 [14] [12.1]	M4×0.7
AWS16	284 [29] [25.1]	M5×0.8
AWS20	480 [49] [42.5]	M6×1
AWS25	1196 [122] [105.9]	M8×1.25

Shock absorber absorption capacity

While the shock absorber is a WS slide table's option, do not use the WS slide table in excess of its specifications (maximum operating speed and maximum load capacity) even if they are within the range of shock absorption capacity.

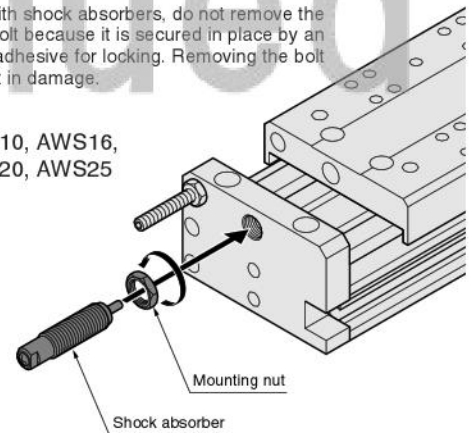

Position adjustment and replacement procedure of shock absorber

1. For shock absorber's installed position adjusting, mounting and removing, use a wrench to fully loosen the mounting nut.
 2. Turn the shock absorber to adjust the position. For replacement, loosen the body thread until it comes off, then screw the new shock absorber.
 3. When the position is determined, tighten the nut and secure the shock absorber.
 4. If mounting a shock absorber after purchasing WS slide table without it, only **AWS6** requires the bracket set **SS-AWS6** (including a bracket, block, and mounting bolts). For **AWS10, 16, 20, and 25**, the shock absorber can be mounted directly onto the unit.
- Tighten the mounting bolt with a tightening torque of 78N·cm [8kgf·cm] [6.9in·lbf].

Note: For units with shock absorbers, do not remove the mounting bolt because it is secured in place by an anaerobic adhesive for locking. Removing the bolt could result in damage.

**AWS10, AWS16,
AWS20, AWS25**

Fasten the hexagon nut for mounting shock absorber in place to the tightening torques shown in the table below. Torques in excess of these values can damage the threads.

Model	Tightening torque N·cm [kgf·cm] [in·lbf]	Width across flats of mounting nut mm [in.]
AWS6	85 [8.7] [7.5]	8 [0.315]
AWS10	245 [25] [21.7]	10 [0.394]
AWS16	637 [65] [56.4]	12 [0.472]
AWS20	1177 [120] [104.2]	14 [0.551]
AWS25	1177 [120] [104.2]	14 [0.551]

- Cautions:**
1. Do not use the shock absorber in a place where water or oil drips. If using it in these places, install a cover, etc. so that water or oil does not splash it directly. This could lead to improper operation and may reduce the absorption capacity.
 2. Do not loosen the small screw on the rear end of the shock absorber. The oil inside will leak out which will fail the function of the shock absorber.
 3. Do not install other shock absorbers in this product without permission. When other shock absorbers are used, damage to the cylinder, etc., may occur.

WS SLIDE TABLES

Note: Shock absorber is optional.

Specifications

Item	Model	AWS6	AWS10	AWS16	AWS20	AWS25

Notes: 1. Figures in parentheses () are for values when the optional shock absorber is used.

2. Apply lithium soap-based grease on the raceway surface of track rail every 6 months or every 300km [186mi.] of traveling distance.

3. The guide manufacturer is Nippon Thompson Co., Ltd. The guide specifications may be changed without notice.

Shock Absorber Specifications

Item	Model	KSHA4×4-BD	KSHA5×5-E	KSHA6×8-F	KSHA7×8-G	KSHA7×8-K
Applicable model		AWS6	AWS10	AWS16	AWS20	AWS25
Maximum absorption	J {kgf·m} [ft·lbf]	0.5 {0.05} [0.37]	2.0 {0.2} [1.48]	2.9 {0.3} [2.14]	3.9 {0.4} [2.88]	5.9 {0.6} [4.35]
Absorbing stroke	mm [in.]	4 [0.157]	5 [0.197]		8 [0.315]	
Maximum impact speed	m/s [ft./sec.]	1.0 [3.28]				
Maximum operating frequency	cycle/min	60			30	
Spring return force	N {kgf} [lbf.]	3.0 {0.31} [0.67]	6.0 {0.61} [1.35]		8.5 {0.87} [1.91]	
Angle variation		1° or less			3° or less	
Operating temperature range	°C [°F]	0~60 [32~140]				

Note: Do not exceed the WS slide table maximum load capacity and maximum speed, even when they are within the shock absorber's absorption capacity.

Remarks: 1. Do not loosen the small screw on the rear end of the shock absorber. The oil inside will leak out which will fail the function of the shock absorber.

2. Life of shock absorber may vary from the WS slide table, depending on its operating conditions.

3. For details of shock absorber, see Catalog No. BKUA001 "General Catalog of Air Treatment, Auxiliary, Vacuum."

Cylinder Thrust

Select a suitable cylinder bore size considering the load and air pressure to obtain the required thrust.

Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio = $\frac{\text{Load}}{\text{Calculated value}}$) of 70% or less (50% or less for high speed application).

Bore size mm [in.]	Piston rod diameter mm [in.]	Operation direction	Pressure area mm ² [in. ²]	Air pressure MPa [psi.]

SENSOR SWITCHES

Solid State Type, Reed Switch Type

Order Code

Sensor switch

ZE135 — Solid state type with indicator lamp	DC10~28V	Horizontal lead wire	ZE155 — Solid state type with indicator lamp	DC4.5~28V	Horizontal lead wire
ZE235 — Solid state type with indicator lamp	DC10~28V	Vertical lead wire	ZE255 — Solid state type with indicator lamp	DC4.5~28V	Vertical lead wire
ZE101 — Reed switch type without indicator lamp	DC5~28V AC85~115V	Horizontal lead wire	ZE102 — Reed switch type with indicator lamp	DC10~28V AC85~115V	Horizontal lead wire
ZE201 — Reed switch type without indicator lamp	DC5~28V AC85~115V	Vertical lead wire	ZE202 — Reed switch type with indicator lamp	DC10~28V AC85~115V	Vertical lead wire

● For details of sensor switches, see p.1398.

Moving Sensor Switch

- Loosening the mounting screw allows the sensor switch to be moved along the switch mounting groove on the cylinder body.
- Tighten the mounting screw with a tightening torque of 0.1~0.2N·m {1~2kgf·cm} [0.9~1.8in·lbf].

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range: ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

● Solid state type

Item	Bore size	6 [0.236]	10 [0.394]	16 [0.630]	20 [0.787]	25 [0.984]
Operating range: ℓ		2.5~3.5 [0.098~0.138]	2.5~4.0 [0.098~0.157]	2.0~4.5 [0.079~0.177]		2.5~5.5 [0.098~0.217]
Response differential: C		1.0 [0.039] or less		1.2 [0.047] or less		1.5 [0.059] or less
Maximum sensing location ^{Note}		6 [0.236]				

Remark: The above table shows reference values.

Note: It is a value measured from the other end side of the lead wire.

● Reed switch type

Item	Bore size	6 [0.236]	10 [0.394]	16 [0.630]	20 [0.787]	25 [0.984]
Operating range: ℓ		4.5~7.5 [0.177~0.295]	6.5~8.5 [0.256~0.335]	6.0~8.0 [0.236~0.315]		7.0~9.5 [0.276~0.374]
Response differential: C		1.5 [0.059] or less				
Maximum sensing location ^{Note}		10 [0.394]				

Remark: The above table shows reference values.

Note: It is a value measured from the other end side of the lead wire.

When Mounting the WS Slide Tables with Sensor Switches in Close Proximity

When mounting the WS slide tables with sensor switches in close proximity, install the slide tables so that they should not be below the values shown in the following tables.

Code	Type	Bore size	6 [0.236]	10 [0.394]	16 [0.630]	20 [0.787]	25 [0.984]
A	Solid state type		44 [1.73]	53 [2.09]	66 [2.60]	73 [2.87]	90 [3.54]
	Reed switch type		44 [1.73]	51 [2.01]	61 [2.40]	72 [2.83]	90 [3.54]
B	Solid state type		8 [0.31]	2 [0.08]	5 [0.20]	1 [0.04]	0
	Reed switch type		8 [0.31]	0	0	0	0

Code	Type	Bore size	6 [0.236]	10 [0.394]	16 [0.630]	20 [0.787]	25 [0.984]
C	Solid state type		8 [0.31]	8 [0.31]	7 [0.28]	4 [0.16]	4 [0.16]
	Reed switch type		8 [0.31]	4 [0.16]	4 [0.16]	4 [0.16]	4 [0.16]

Remark: For mountings other than the above, consult us.

Mounting Location of End of Stroke Detection Sensor Switch

● Solid state type (ZE135, ZE155, ZE235, ZE255)

Model	Stroke	A	B	C	D
AWS6	×25	30.5 [1.201]	— Note	42.5 [1.673]	17.5 [0.689]
