

Multi functional support for small movements, MULTI MOUNT CYLINDERS

In addition to the directly installed side mounting type, 3 types of mounting brackets provide appropriate responses for various mounting requirements.

Moreover, this is a design that secures a high degree of parallel and perpendicular accuracy in relation to the piston rod axial center and mounting surface in any mounting type.

This combination of a square and compact body with mounting brackets has further broadened the degree of freedom for equipment design.

- Even while preserving the basic design of previous types, we have made overall improvements through the addition of a built-in rubber bumper and other changes.
We have not only expanded the series but have also boosted reliability and utility.
- Even the non-rotating type is now available in the double acting type, the single acting push/pull types, and the double acting double rod type, to respond to diversified needs with high non-rotating precision by the guide pin.
- Although the 3 types of sensor switches are all compact with cross section dimensions of □4mm [0.157in.], mounting to the cylinder and adjusting the position are easy.
Comes with a movement indicator lamp that makes it possible to monitor movement from 4 directions, providing multi functional support for small movements.

Basic Type and Configuration

Page where specifications are shown — 97

Double acting type BDA	
	
Single acting push type BSA	
	
Single acting pull type BTA	
	
Double acting double rod type BDAD	
	

Mounting Bracket Configuration and Application:

For the order codes of mounting brackets only, see p.125.

Page where specifications are shown — 113

Non-rotating double acting type BDAL	
	
Non-rotating single acting push type BSAL	
	
Non-rotating single acting pull type BTAL	
	
Non-rotating double acting double rod type BDADL	
	

Side mount (Standard) 	 Side mounting thru hole used for direct installation.
	 Plate-like spacer used for easy piston rod center adjustment.
	 Collar and counter-bore of the cylinder body used for easy piston rod center adjustment.
Foot A mount Foot mounting brackets are not available for the rod sides of the non-rotating and non-rotating double rod type.	 Rod side foot mounting bracket used for one-side support.
	 Head side foot mounting bracket used for one-side support.
	 Foot mounting bracket on both sides used for rigid mounting.
Flange A mount	 Rod side flange mounting brackets used for panel mount.
	 Rod side flange mounting brackets used for wall mount.
	 Head side flange mounting brackets used for wall mount.
	 Flange mounting brackets at both sides used for sandwich mount. (Should be adjusted at a field.)
Flange B mount	 Rod side flange mounting bracket used for panel mount.
	 Head side flange mounting bracket used for panel mount.

Note: Can be installed only on the opposite the rod side with the non-rotation plate of a double rod cylinder.

Calculation example: To add 2 sensor switches to the cylinder with magnet, double acting type BDALS10×20,

$$69 + (20 \times 2) = 109 \text{ g [3.84 oz.]}$$

Remark: There are 2 types of sensor switch lead wire lengths.

A: 1000mm [39in.], B: 3000mm [118in.]

Order Codes for Non-rotating Cylinders

Cylinder specification	System (Made to order)	Mounting type (Rod side)	Sensor switch	Lead wire length	Number of Sensor switches
Blank: Standard cylinder ^{Note1} S: Cylinder with magnet	Blank: Standard specifications NCU: Non-ion specification ● With countermeasure for non generating copper ion ● Made to order	Side mount  Blank	No sensor switch  Blank	A: 1000mm [39in.] B: 3000mm [118in.]	No sensor switch  Blank
		Flange A mount  -3A	With ZC130  -ZC130 ● Solid state type ● With indicator lamp ● DC10~28V ● 2-lead wire	With CS5T  -CS5T ● Reed switch type ● Without indicator lamp ● DC5~28V ● AC85~115V	With 1 sensor switch  1
		Flange B mount ^{Note2}  -3B	With ZC153  -ZC153 ● Solid state type ● With indicator lamp ● DC4.5~28V ● 3-lead wire	With CS11T  -CS11T ● Reed switch type ● With indicator lamp ● DC10~28V	With 2 sensor switches  2

Basic type	Bore size × Stroke	Mounting type	Sensor switch	Lead wire length	Number of Sensor switches
Double acting type	S ×	-NCU	-3A -3B	-ZC130 -ZC153 -CS5T -CS11T	A B 1 2
Single acting push type					
Single acting pull type					
Double acting double rod type					

Notes: 1. The magnet for the sensor switch is not built in. Always use the cylinder with magnet when using the sensor switch.
 2. Two sensor switches cannot be mounted on a cylinder with flange B mount. Mount 1 sensor switch on the head side when the flange B mount is used on the rod side, and mount 1 sensor switch on the rod side when the flange B mount is used on the head side.

Remark: For the cylinder joint and cylinder rod end mounted on the piston rod end, see p.1568.

● See table for operation type, bore size and stroke.
 ● Order the head side mounting bracket separately. Cannot be ordered as already assembled the mount on the cylinder.
 ● For the order codes of mounting brackets only, see p.125.

● For the order codes of sensor switches only, see p.126.
 ● In the 5mm [0.197in.] cylinder strokes, 1 sensor switch installation is standard for CS5T and CS11T. When mounting 2 units, use the solid state type.
 ● For details, see p.1544.

● In the 5mm [0.197in.] cylinder strokes, 1 sensor switch is standard for the reed switch type (CS5T, CS11T).

Additional Parts (To be ordered separately)

Mounting brackets

- Side mount (Head cover)
- Foot A mount
- Flange A mount
- Flange B mount
- The photographs above show head side mounting brackets.
- For the order codes, see p.125.
- Comes with 2 mounting screws.

Shield plate

- For cylinder with magnet.
- For the order code, see p.128.
- Comes with 2 mounting screws.

SENSOR SWITCHES

Solid State Type, Reed Switch Type

Order Codes (for Sensor Switches Only)

		Sensor switches	Option	
			Lead wire length	With sensor holder
Solid state type with indicator lamp	DC10~28V	ZC130	A B	-BDAS6 -BDAS10 -BDAS16
Solid state type with indicator lamp	DC4.5~28V	ZC153		
Reed switch type without indicator lamp	DC5~28V	CS5T		
Reed switch type with indicator lamp	AC85~115V	CS11T		
Reed switch type with indicator lamp	DC10~28V	CS11T		

● A : 1000mm [39in.]

● B : 3000mm [118in.]

★ Order codes of sensor holders only

For ϕ 6 cylinder — C1-BDAS6

For ϕ 10 cylinder — C1-BDAS10

For ϕ 16 cylinder — C1-BDAS16

● -BDAS6 : For ϕ 6 cylinder

● -BDAS10 : For ϕ 10 cylinder

● -BDAS16 : For ϕ 16 cylinder

● For sensor switch details, see p.1544.

MULTI MOUNT CYLINDERS

Moving Sensor Switch

- Loosening mounting screw allows the sensor switch to be moved freely in the cylinder's axial direction.
- Tighten the mounting screw with a tightening torque of 19.6N·cm [1.73in·lbf] or less.

● ϕ 6

● ϕ 10,16

Minimum Cylinder Strokes When Using Sensor Switches

Bore size	mm [in.]			
	Solid state type sensor switch		Reed switch type sensor switch	
	Mounting 2 pcs.	Mounting 1 pc.	Mounting 2 pcs.	Mounting 1 pc.
6 [0.236]	5	5	10	5
10 [0.394]				
16 [0.630]				

Remark: Two sensor switches cannot be mounted on a cylinder with flange B mount.

Mount 1 sensor switch on the head side when the flange B mount is used on the rod side, and mount 1 sensor switch on the rod side when the flange B mount is used on the head side.

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range: ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential: C

The distance between the point where the piston turns the switch ON, and the point where the switch is turned OFF as the piston travels in the opposite direction.

Bore size	ZC130□, ZC153□		CS5T□, CS11T□	
	Operating range	Response differential	Operating range	Response differential
6 [0.236]	2.0~3.0 [0.079~0.118]	0.3 [0.012] or less	4.8~7.2 [0.189~0.283]	1.3 [0.051] or less
10 [0.394]	2.0~3.0 [0.079~0.118]	0.3 [0.012] or less	5.8~8.3 [0.228~0.327]	2.0 [0.079] or less

16 [0.630]	X	7.0 [0.276]	12.5 [0.492]	9 [0.354]
	Y	7.0 [0.276]	12.5 [0.492]	9 [0.354]

Remarks: 1. The above tables give reference values for the standard strokes. For the procedure to find-out the best position, see p. 129.

2. The above figures show the piping connection port when it has been turned to face upward.

3. Use the distance between the cylinder mounting hole and the rod cover to confirm the mounting location of the double rod cylinder's end of stroke detection sensor switch.

4. Mount the sensor switch so that the surface showing the sensor switch model marking faces up.

● $\phi 6$

● $\phi 10$

● $\phi 16$

Precautions for Mounting Cylinders with Magnet

When mounting 2 or more Multi Mount Cylinders with sensor switches in close proximity, use the conditions shown to the right.

Bore size mm [in.]	Without shield plate		With shield plate
6 [0.236]	25mm [0.984] or longer	23mm [0.906] or longer	22mm [0.866] or longer
10 [0.394]	29mm [1.142] or longer	31mm [1.220] or longer	25mm [0.984] or longer
16 [0.630]	35mm [1.378] or longer	39mm [1.535] or longer	31mm [1.220] or longer

Remark: Aside from the above, there are no particular restrictions on mounting.

Shield Plate Type (Order Codes)

Operation type Stroke mm Bore size mm [in.]	Applicable shield plate type			
	Double acting type, Double acting double rod type		Single acting push/pull type	
	5, 10, 15	20, 25, 30	5, 10	15
6 [0.236]	BS061	BS062	BS061	BS062
10 [0.394]	BS101	BS102	BS101	BS102
16 [0.630]	BS161	BS162	BS161	BS162

Remarks: 1. All shield plates come with 2 mounting screws.
2. Order all shield plates separately.

MULTI-SE

Replacement of mounting brackets

● Rod side mounting bracket

Remove the rod end nut, loosen the rod cover (mounting bracket) mounting screws, and remove the rod cover (mounting bracket). Assemble the replacement mounting bracket by reversing the order of procedures for removal.

For non-rotating cylinders, loosen the setscrew for plate and remove the plate assembly, and remove the rod cover (mounting bracket). For assembly, align and assemble the guide pin holes of the mounting bracket and the cylinder body, insert the plate assembly, and tighten and secure the setscrew for plate against the piston rod. In this case, retract the piston rod in the fully retracted position at the head side stroke end, maintain a clearance of about 0.5mm [0.020in.] between the plate and rod bushing, and secure the plate assembly in place.

The diagram shows a non-rotating single acting push type cylinder.

● Head side mounting bracket

Loosen the head cover (mounting bracket) mounting screws and remove the head cover (mounting bracket). Assemble the replacement mounting bracket by reversing the order of procedures for removal.

- Cautions:**
1. To increase the mounting accuracy of the side mounting, assemble so that the rod cover and head cover do not protrude from the cylinder body, and mount so that the cylinder body contacts tightly to the device.
 2. Use the supplied mounting screws, or when using commercial screws, use the sizes shown in the table below to secure mounting brackets in place.

Bore size mm [in.]	Screw size	Length of below head mm [in.]
6 [0.236]	M2.6×0.45	6 [0.236]
10 [0.394]	M3×0.5	8 [0.315]
16 [0.630]	M4×0.7	8 [0.315]

3. Refer to the figures in the table below for the tightening torque of the non-rotating cylinder's setscrew for plate, and for the size of the Allen wrench used.

Bore size mm [in.]	Tightening torque N·cm [in·lbf]	Hexagonal bar spanner nominal size mm [in.]
6 [0.236]	49 [4.37]	1.27 [0.050]
10 [0.394]	98.1 [8.68]	1.5 [0.059]
16 [0.630]	137.3 [12.2]	2 [0.079]

Sensor switches

Procedure for finding the best sensing position

● Setting the head side stroke end

1. Push piston rod to the fully retracted position.
2. Install a sensor switch in a holder without tightening a mounting screw all the way, move the switch from head side to rod side until it turns ON (for ZC130□, ZC153□ and CS11T□, when the LED lights up), then move the switch 1 notch (= 1mm [0.039in.]) for ZC130□ and ZC153□, or 2 notches (= 2mm [0.079in.]) for CS5T□ and CS11T□ toward the rod side, and tighten the mounting screw.

● Setting the rod side stroke end

Conduct the same procedure as the head side, but on the reversed way.

1. Pull piston rod to the fully extended position.
2. Install a sensor switch in a holder without tightening a mounting screw all the way, move the switch from rod side to head side until it turns ON, then move the switch 1 notch (= 1mm [0.039in.]) for ZC130□ and ZC153□, or 2 notches (= 2mm [0.079in.]) for CS5T□ and CS11T□ toward head side, and tighten the mounting screw.

● Caution when installing cylinder with sensor switch

In the ZC type sensor switches, the opposite side from the model marking surface is the sensing surface side. Mount it so that the cylinder magnet comes to the sensing surface side.

General precautions

Piping

1. In applications with high load ratio or high speed, use an externally mounted stopper to prevent direct shock to the cylinder.
2. Use the cylinder body's 4-M3 × 0.5 female thread only for mounting a sensor switch or shield plate.

Piping

Always thoroughly blow off (use compressed air) the tubing before connecting it to the cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.

Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent.

Avoid using spindle oil or machine oil.

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 µm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.
