High-quality stainless steel cylinders ahead of all others

SLIM CYLINDERS

Use durable piston seals.

The two piston seals are the durable PPY type. This prevents inner air leakage, and achieves smooth operation from low-speed to high-speed ranges.

Sensor switches can be installed anytime after cylinder installation.

Magnets as standard equipment across the entire series allow sensor switches to be installed anytime after the cylinder has been installed.

High installation accuracy and simple mounting operations.

A centering location on the rod cover improves mounting precision. Moreover, the mounting nut's improved thread precision means that holding the cylinder body in place by hand is sufficient for mounting nut tightening operations. Mounting in hard-to-reach places is easy.

Criteria for Selection: Slim Cylinder Allowable Kinetic Energy

Slim cylinders (with the exception of heat resistant specifications) include a cushioning mechanism.

This mechanism is intended to reduce as much as possible the impact of pistons with high kinetic energy when they stop at the end of the stroke. There are two types of cushions, as shown below.

● Rubber bumpers (Standard equipment)

Rubber bumpers installed on both sides of the piston soften the impact at the end of the stroke, and absorb the impact noise during stopping, in response to high-frequency and high-speed operations. They are standard equipment across the whole series, with the exception of heat resistant specifications.

Note that a certain amount of rebound will occur at the end of the stroke on the cylinder with the rubber bumpers.

● Variable cushions

Use variable cushions for large load or high-speed operations that rubber bumpers cannot adequately absorb. The impact is absorbed by compressing air, when the piston stops at the end of the stroke.

Since the cushioning stroke is included within the cylinder stroke, be careful to ensure that the cushion is not excessively performed during cylinder applications of 25mm strokes or less. An excessively performed cushion can result in too much time for each stroke, reducing efficiency. When operated at or below the absorbable kinetic energy shown in the table below, the cushion seal life is 1 million operations or more.

The load kinetic energy can be obtained through the formulas shown below.

$$E_x = \frac{m}{2} v^2$$

Ex: Kinetic energy (J)
m: Load mass (kg)
v: Piston speed (m/s)

$$E'_x = \frac{W}{2g} v'^2$$

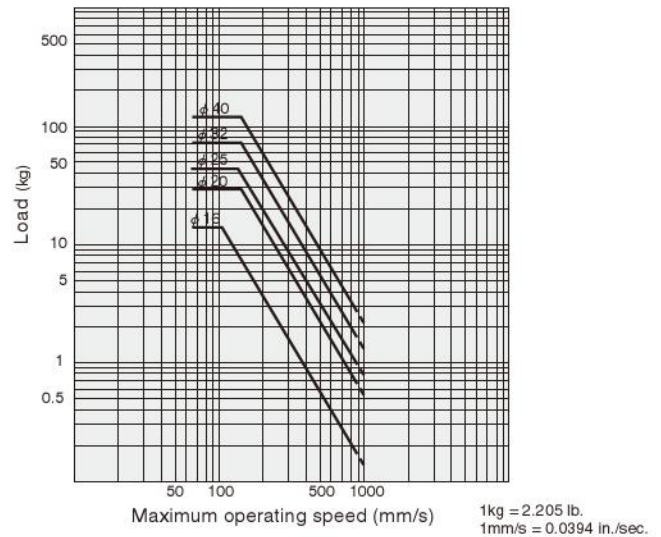

E'x: Kinetic energy [ft·lbf]
W: Load [lbf.]
v': Piston speed [ft./sec.]
g: Acceleration of gravity 32.2 [ft./sec.²]

Operating speed range

- Rubber bumper 30~800mm/s [1.2~31.5in./sec.]
- Variable cushion 30~1000mm/s [1.2~39.4in./sec.]

Bore size mm [in.]	Allowable kinetic energy J [ft·lbf]	
	With rubber bumpers	With variable cushion
16 [0.630]	0.07 [0.052]	0.18 [0.13]
20 [0.787]	0.27 [0.20]	0.7 [0.52]
25 [0.984]	0.40 [0.30]	1.05 [0.77]
32 [1.260]	0.65 [0.48]	1.8 [1.33]
40 [1.575]	1.2 [0.89]	2.8 [2.07]
50 [1.969]	—	3.5 [2.58]
63 [2.480]	—	4.5 [3.32]

Rubber bumper (Graph 1)

Variable cushion (Graph 2)

How to read the graphs

From Graph 1, the capacity of the rubber bumpers limits the maximum speed to 500mm/s [19.7in./sec.] or less when a φ32 Slim Cylinder is used to carry a load of 5kg [11.0lb.].

From Graph 2, a φ32 cylinder with variable cushion can be selected to carry a load of 8kg [17.6lb.] at a maximum speed of 600mm/s [23.6in./sec.].

SLIM CYLINDERS

Double Acting Type

Symbols

- Without variable cushion
- With variable cushion

Specifications

Item	Bore size mm [in.]	20, 25 [0.787, 0.984]	32, 40 [1.260, 1.575]	50, 63 [1.969, 2.480]

63	25 50 75 100 150 200 [250 300 350 400 500]	300[600]	300		

- Remarks: 1. Stroke tolerance $^{+1}_{0} [^{+0.039}_{0} \text{in.}]$
 2. For non-standard strokes, consult us.
 3. Items in parentheses [] are for cases when foot mounting brackets are used for mounting.
 4. The minimum operating pressure when the stroke is over the maximum stroke at bore sizes of $\phi 20 \sim \phi 40$ is 0.2MPa [29psi].

Order Codes

DA [] [] **20×50** [] [] [] [] [] [] [] [] []

Bore size × Stroke

Non-ion specification
 Blank — Standard
 NCU — Non-ion specification

Bellows or scraper
 Blank — No bellows
 J — With bellows (Made to order)
 Y — With scraper (Made to order; available at $\phi 50$ and $\phi 63$ only)

With or without variable cushion
 Blank — Standard cylinder
 C — Cylinder with variable cushion (Available at $\phi 20 \sim \phi 40$ only) (Standard equipment for $\phi 50$ and $\phi 63$)

Mounting type
 Blank — Basic type
 1 — Double foot mounting type
 3 — Flange mounting type
 8B — Pivot mounting type with bushing ($\phi 50$ and $\phi 63$ only)
 8E — Pivot mounting type with supporting bracket (with pin) ($\phi 20 \sim \phi 40$ only)
 8B-8E — Pivot mounting type with bushing and supporting bracket ($\phi 50$ and $\phi 63$ only)
 11 — Head trunnion type*
 12 — Rod trunnion type*
 11-11T — Head trunnion type, with supporting bracket*
 12-12T — Rod trunnion type, with supporting bracket*
 ● For the pivot mounting type with bushing at $\phi 20 \sim \phi 40$, see made to order specifications on p.414.
 ● Trunnion type is available at $\phi 20 \sim \phi 40$ only. Moreover, it is not available for the variable cushion type.
 ● Mounting brackets are included at shipping. (Except pivot type and pivot type with bushing)
 ※ A head cover for the standard is a short head. Order code "A" is not required.

Rod end accessory
 Blank — No rod end accessory
 I — I type knuckle
 Y — Y type knuckle (with pin)
 ● For the cylinder joint and cylinder rod end, see p.1568.

Number of sensor switches
 1 — With 1 sensor switch
 2 — With 2 sensor switches
 3 — With 3 sensor switches
 : — :

Lead wire length
 (Applies to all except CS□F)
 A — 1000mm [39in.]
 B — 3000mm [118in.]

Sensor switch (for cylinders with sensor switches)
 Blank — No sensor switch
 ZG530 — 2-lead wire Solid state type with indicator lamp DC10~28V
 ZG553 — 3-lead wire Solid state type with indicator lamp DC4.5~28V
 DC10~30V
 CS3M — Reed switch type with indicator lamp AC85~230V
 DC10~30V
 CS4M — Reed switch type with indicator lamp AC85~115V
 DC3~30V
 CS5M — Reed switch type without indicator lamp AC85~115V
 CS2F — Reed switch type with indicator lamp AC85~230V
 CS3F — Reed switch type with indicator lamp DC10~30V
 CS4F — Reed switch type with indicator lamp DC10~30V
 CS5F — Reed switch type without indicator lamp DC3~30V
 ● For details of sensor switches, see p.1544.
 ● CS□F comes with DIN connector. All others are grommet type.

Slim double acting cylinder

Head cover specification
 Blank — Standard head
 A — Short head (For the basic type and flange mounting type only)

Inner Construction and Major Parts (cannot be disassembled)

● $\phi 20 \sim \phi 40$ Standard cylinder

● $\phi 20 \sim \phi 40$ Cylinder with variable cushion

● $\phi 50, \phi 63$ Standard cylinder

● $\phi 50, \phi 63$ With scraper

Note: Set the cushion needle tightening torque to 1.0N·m [8.85in·lbf] or less.

Major Parts and Materials

Parts	Bore size	20	25~40	50, 63

SLIM CYLINDERS

Single Acting Push Type

Symbol

Specifications

Item	Bore size mm [in.]	20, 32 [0.787, 1.260]
Operation type		Single acting push type
Media		Air
Mounting type		Basic type, Foot type, Flange type, Pivot type
Operating pressure range MPa [psi.]		0.16~0.9 [23~131]
Proof pressure MPa [psi.]		1.32 [191]
Operating temperature range °C [°F]		0~70 [32~158]
Operating speed range mm/s [in./sec.]		100~700 [3.9~27.6]
Returning speed mm/s [in./sec.]		350 [13.8]
Cushion		Fixed type (The retracted side only has a rubber bumper.)
Lubrication		Not required
Port size Rc		1/8
Breather		With filter

Bore Size and Stroke

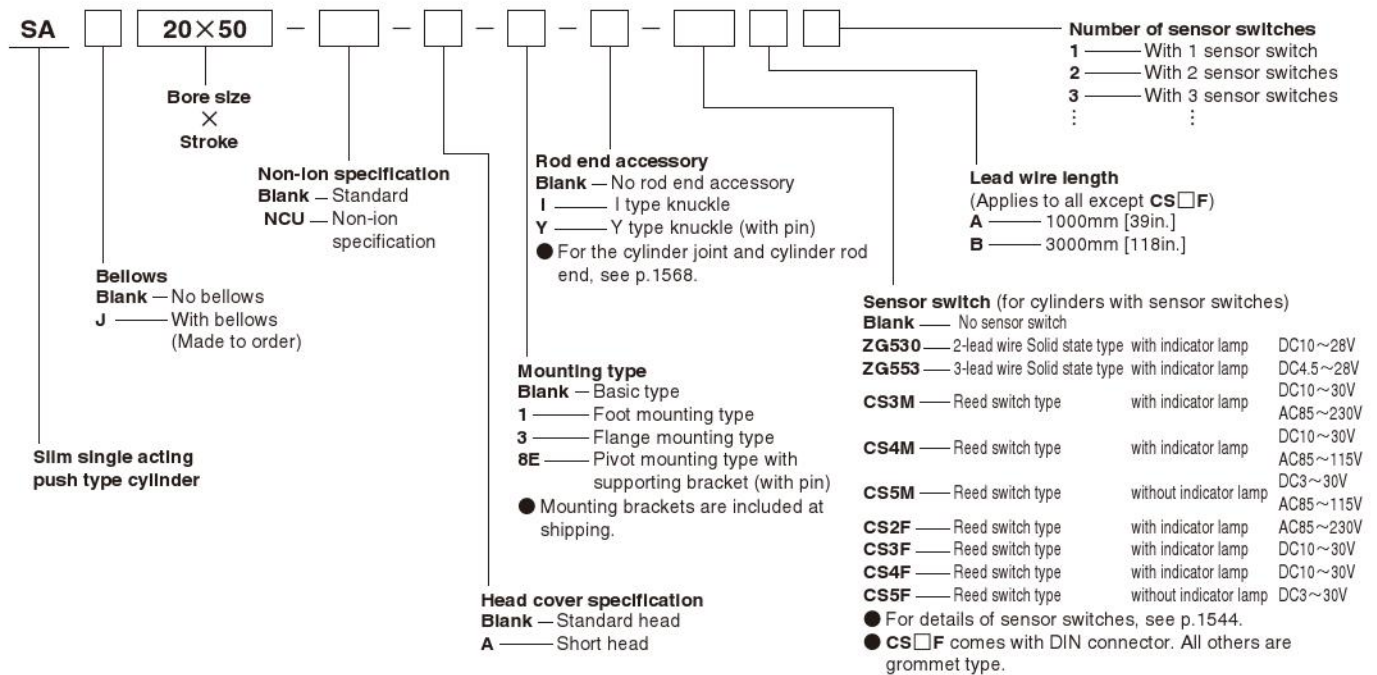

Bore size	Standard strokes	Maximum stroke	Maximum available stroke	
			No bellows	With bellows
20	25 50 75	75	500	
32	25 50 75 100	100	500	400

Remarks 1: Stroke tolerance $^{+1}_0$ [+0.039in.]
 2: For non-standard strokes, consult us.
 3: The minimum operating pressure when the stroke is over the maximum stroke is 0.2MPa [29psi].

Spring Return Force

Bore size mm [in.]	Zero stroke	Stroke end
20 [0.787]	7.5 [1.69]	38.2 [8.59]
32 [1.260]	14.7 [3.30]	76.5 [17.2]

Order Codes

Inner Construction and Major Parts (cannot be disassembled)

Major Parts and Materials

Parts	Bore size	20, 32
Cylinder tube		Stainless steel
Piston (A)		Plastic
Piston (B)		Stainless steel
Piston rod		Steel (hard chrome plated)
Rod cover		Aluminum alloy (anodized)
Head cover		
Seal		Synthetic rubber (NBR)
Bumper		
Stopper		Steel pipe
Spacer		Steel
Spring		Piano wire
Filter		Foamed metal
Magnet		Plastic magnet
Bellows		Nylon tarpaulin (heat resistant temperature 70°C [158°F])
Y type knuckle, I type knuckle Pivot mounting with supporting bracket		Mild steel (zinc plated)

Seals

Note: Seals cannot be replaced.

Parts	Quantity	Piston seal
Bore size mm		1
20		PPY-20
32		PPY-32

Mass

Bore size mm [in.]	Mass of basic type				Mass of mounting bracket				
	Stroke mm				Foot bracket	Flange bracket	Pivot bracket	Y type knuckle	I type knuckle
	25	50	75	100					
20 [0.787]	0.22 [0.49] (0.21 [0.46])	0.27 [0.60] (0.26 [0.57])	0.32 [0.71] (0.31 [0.68])	—	0.14 [0.31]	0.08 [0.18]	0.06 [0.13]	0.041 [0.090]	0.036 [0.079]
32 [1.260]	0.37 [0.82] (0.35 [0.77])	0.56 [1.23] (0.54 [1.19])	0.71 [1.57] (0.69 [1.52])	0.80 [1.76] (0.78 [1.72])	0.19 [0.42]	0.10 [0.22]	0.14 [0.31]	0.075 [0.165]	0.070 [0.154]

Note: Figures in parentheses () are for short head type.
 Calculation example: For foot mounting type of 32mm bore size and 75mm stroke
 $0.71 + 0.19 = 0.90\text{kg}$ [1.98lb.]

Air Consumption

● Air consumption for every 100mm stroke in single acting cylinder per 1 reciprocation

Specifications

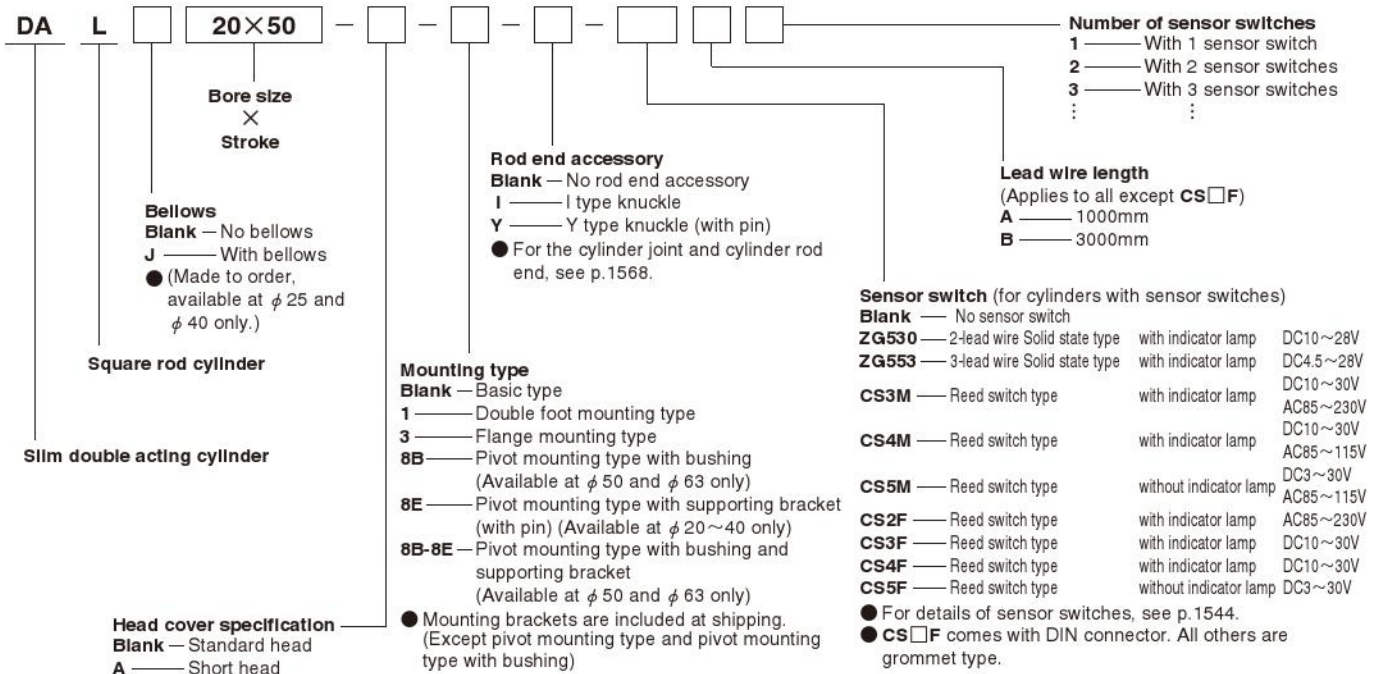

Item	Bore size mm [in.]	
	20~40 [0.787~1.575]	50, 63 [1.969, 2.480]
Operation type	Double acting type	
Media	Air	
Mounting type	Basic type, Foot type, Flange type	
Operating pressure range MPa [psi.]	0.06~0.9 [9~131]	0.05~0.7 [7~102]
Proof pressure MPa [psi.]	1.32 [191]	
Operating temperature range °C [°F]	0~70 [32~158]	
Operating speed range mm/s [in./sec.]	50~800 [2.0~31.5]	50~500 [2.0~19.7]
Cushion	Fixed type (Rubber bumper)	Variable type (Stroke 15mm [0.59in.])
Lubrication	Not required	
Port size	Rc 1/8	1/4

Bore Size and Stroke

Bore size	Standard strokes	mm	
		Maximum stroke	Maximum available stroke
20	25 50 75 100 125 150	200	400
25	25 50 75 100 125 150 200	250	
32	25 50 75 100 125 150 200	300	500
40	25 50 75 100 125 150 200 250 300	400 (300)	
50	25 50 75 100 150 200 250 300		
63	25 50 75 100 150 200 250 300		

- Remarks: 1. Stroke tolerance $+ \frac{0}{0} [+0.039in.]$
 2. For non-standard strokes, consult us.
 3. Figures in parentheses () are for cylinders with bellows.
 4. The minimum operating pressure when the stroke is over the maximum stroke at bore size of $\phi 20 \sim \phi 40$ is 0.2MPa [29psi.].

Order Codes

Inner Construction and Major Parts (cannot be disassembled)

● $\phi 20 \sim \phi 40$

● $\phi 50, \phi 63$

● With scraper

Note: Set the cushion needle tightening torque to 1.0N·m [8.85in·lbf] or less.

Major Parts and Materials

Parts	Bore size	20~40	50, 63
Cylinder tube		Stainless steel	
Piston		Plastic	
Piston rod		Steel (hard chrome plated)	
Rod cover		Aluminum alloy (anodized)	
Seal		Synthetic rubber (NBR)	
Bumper		Synthetic rubber (NBR)	—
Scraper		—	Synthetic rubber (NBR)
Collar		—	Aluminum (anodized)
Magnet		Plastic magnet	
Bellows		Nylon tarpaulin (heat resistant temperature 70°C [158°F])	
Y type knuckle, I type knuckle		Mild steel (zinc plated)	

Seals Note: Seals cannot be replaced.

SLIM LOW HYDRAULIC CYLINDERS

Symbol

Specifications

Item	Bore size mm [in.]	20~40 [0.787~1.575]	50 [1.969]	63 [2.480]
Operation type		Double acting type		
Media		Turbine oil with defoaming agent (ISO VG22~100 or equivalent) or petroleum-based hydraulic oil		
Mounting type		Basic type, Foot type, Flange type, Pivot type		
Operating pressure range	MPa [psi.]	0.2~0.9 [29~131]	0.2~0.7 [29~102]	
Proof pressure	MPa [psi.]	1.32 [191]	1.03 [149]	
Operating temperature range	°C [°F]	0~70 [32~158]		
Operating speed range	When one side is air and the other side is oil	1~100 [0.04~3.94]	0.5~150 [0.02~5.91]	0.5~100 [0.02~3.94]
	When both sides are oil	1~60 [0.04~2.36]	0.5~100 [0.02~3.94]	0.5~50 [0.02~1.97]
Cushion		Fixed type (Rubber bumper)	None	
Port size	Rc	1/8	1/4	

Notes: 1. The low hydraulic cylinder is recommended to be used with oil on both sides. The use of oil on one side and air on the other side could result in imprecise speed control, and oil could leak across to the air side. In addition, use meter-out control for the speed control.
 2. Bore sizes ϕ 50 and ϕ 63 have air bleed ports. Loosen the plugs to bleed air of the cylinder inside.

3. When using the reed switch type sensor, maintain a minimum speed of 30mm/s [1.2in./sec.] or more.
 4. Do not use nonflammable hydraulic fluid, machine oil, or spindle oil.
 5. Be aware that changes in oil temperature can alter the speed.

Bore Size and Stroke

Bore size	Standard strokes	Maximum stroke		Maximum available stroke	
		No bellows	With bellows	No bellows	With bellows
20	25 50 75 100 125 150	200		1050	740
25	25 50 75 100 125 150 200	250			
32	25 50 75 100 125 150 200	300			
40	25 50 75 100 125 150 200 250 300	400	300	900	740
50	25 50 75 100 150 200 [250 300 350 400]	300[500]	300		
63	25 50 75 100 150 200 [250 300 350 400 500]	300[600]	300		

Remarks: 1. Stroke tolerance $^{+1}_{0}$ [+0.039in.]
 2. For non-standard strokes, consult us.
 3. Figures in square brackets [] are for cases when foot mounting brackets are used for mounting.

Order Codes

DA **H** 20×50 - - - - - -

Low hydraulic cylinders
Slim double acting cylinder

Bore size × Stroke
Bellows
Blank — No bellows
J — With bellows (Made to order)

Rod end accessory
Blank — No rod end accessory
I — I type knuckle
Y — Y type knuckle (with pin)
● For the cylinder joint and cylinder rod end, see p.1568.

Mounting type
Blank — Basic type
1 — Double foot mounting type
3 — Flange mounting type
8B — Pivot mounting type with bushing (Available at ϕ 50 and ϕ 63 only)
8E — Pivot mounting type with supporting bracket (with pin) (Available at ϕ 20~40 only)
8B-8E — Pivot mounting type with bushing and supporting bracket (Available at ϕ 50 and ϕ 63 only)
● Mounting brackets are included at shipping.

Head cover specification
Blank — Standard head
A — Short head

Number of sensor switches
1 — With 1 sensor switch
2 — With 2 sensor switches
3 — With 3 sensor switches
 :
 :

Lead wire length (Applies to all except CS□F)
A — 1000mm [39in.]
B — 3000mm [118in.]

Sensor switch (for cylinders with sensor switches)
Blank — No sensor switch
ZG530 — 2-lead wire Solid state type with indicator lamp DC10~28V
ZG553 — 3-lead wire Solid state type with indicator lamp DC4.5~28V
CS3M — Reed switch type with indicator lamp DC10~30V
CS4M — Reed switch type with indicator lamp AC85~230V
CS4M — Reed switch type with indicator lamp DC10~30V
CS5M — Reed switch type without indicator lamp AC85~115V
CS5M — Reed switch type without indicator lamp DC3~30V
CS2F — Reed switch type with indicator lamp AC85~115V
CS3F — Reed switch type with indicator lamp AC85~230V
CS3F — Reed switch type with indicator lamp DC10~30V
CS4F — Reed switch type with indicator lamp DC10~30V
CS5F — Reed switch type without indicator lamp DC3~30V
● For details of sensor switches, see p.1544.
● CS□F comes with DIN connector. All others are grommet type.

Inner Construction and Major Parts (cannot be disassembled)

● $\phi 20 \sim \phi 40$

● $\phi 50, \phi 63$

Note: Bore sizes $\phi 50$ and $\phi 63$ have air bleed ports.
Loosen the plugs to bleed air of the cylinder inside.

Major Parts and Materials

SLIM VALPACK CYLINDERS

Standard Rod Cylinders, Square Rod Cylinders

Symbol

Specifications

● Valpack cylinders specifications

Bore size mm [in.]		20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	40 [1.575]	
Item	Solenoid valve series	062 series				125 series	
Operation type	Double acting type						
Media	Air						
Mounting type	Basic type, Foot type, Flange type, Rod trunnion type, Head trunnion type						
Operating pressure range MPa [psi.]	Air cylinder	0.04~0.9 [6~131]					
	Square rod cylinders (φ 25 and φ 40 only)	0.1~0.9 [15~131]					
Proof pressure MPa [psi.]	1.32 [191]						
Operating temperature range °C [°F]	0~60 [32~140]						
Operating speed range mm/s [in./sec.]	30~800	30~500	30~300	30~210	30~450		
	[1.2~31.5]	[1.2~19.7]	[1.2~11.8]	[1.2~8.3]	[1.2~17.7]		
Speed controller	Exhaust throttle valve (in both directions) is standard equipment.						
Cushion	Fixed type (Rubber bumper)						
Lubrication	Not required					Required (Turbine Oil Class 1 [ISO VG32] or equivalent)	
Port size	Rc	1/4					

Note: Solenoid valve 125 series is available (as an option) for bore size φ 40 only.

● Solenoid valve specifications

Series		062 series	125 series
Item	Solenoid specification	Single	Single
	Model	VPS062-4E1-70	VPS125-4E1-70
Operation type	Direct operation		
Number of positions and ports	2 positions, 5 ports		
Effective area mm ² [Cv]	1.8 [0.1]	3.5 [0.19]	
Port size	Rc	1/4	
Lubrication	Not required <small>Required (Turbine Oil Class 1 [ISO VG32] or equivalent)</small>		
Operating pressure range MPa [psi.]	0~0.9 [0~131] (For the solenoid valve alone, however)		
Proof pressure MPa [psi.]	1.32 [191]		
Operating temperature range °C [°F]	0~60 [32~140]		
Shock resistance m/s ² [G]	Lateral direction	980.7 [100]	
	Axial direction	980.7 [100]	
Mounting direction	Any		
Maximum operation frequency Hz	5		

● Solenoid specifications

Rated voltage		AC100V	AC200V	DC24V
Operating voltage range V		90~110 (100±10%)	180~220 (200±10%)	21.6~26.4 (24±10%)
Current value (Applied rated voltage)	Frequency Hz	50	60	50
	Current mA (r.m.s)	140	130	70
Insulation resistance MΩ	100 or more			
Wiring and lead wire length	Grommet type: About 300mm [11.8in.]			
Color of lead wire	Yellow and black	White and black	Red and black	

- Notes: 1. While voltages other than those listed above can be manufactured, consult us about delivery for voltages other than AC100V and AC200V.
2. Since air pressure being used as a self-holding force could cause it to be unstable when using the VPS062-4E2 solenoid valve, always supply power with an electric circuit, to the solenoid valve, while the cylinder is in operation.
3. Consult us about surge suppression measures.

Bore Size and Stroke

● Standard rod cylinder

Bore size	Standard strokes	Maximum stroke	Maximum available stroke
20	25 50 75 100 125 150	200	1050 (740)
25	25 50 75 100 125 150 200	250	
32	25 50 75 100 125 150 200	300	
40	25 50 75 100 125 150 200 250 300	400 (300)	

● Square rod cylinders

Bore size	Standard strokes	Maximum stroke	Maximum available stroke
20	25 50 75 100 125 150	150	500
40			

- Remarks: 1. Stroke tolerance $+1 \begin{smallmatrix} +0.039in. \\ 0 \end{smallmatrix}$
2. For non-standard strokes, consult us.
3. Figures in parentheses () are for cylinders with bellows.
4. The minimum operating pressure when the stroke is over the maximum stroke is 0.2MPa [29psi].

Mass

● Standard rod cylinder

Solenoid valve	Bore size mm	Zero stroke mass				Additional mass for each 1mm [0.0394in.] stroke
		Basic type	Foot type	Flange type	Trunnion type	
062 series	20	0.49 [1.08]	0.62 [1.37]	0.57 [1.26]	0.69 [1.52]	0.0008 [0.0018]
	25	0.54 [1.19]	0.68 [1.50]	0.62 [1.37]	0.73 [1.61]	0.0011 [0.0024]
	32	0.64 [1.41]	0.79 [1.74]	0.74 [1.63]	0.82 [1.81]	0.0015 [0.0033]
	40	0.80 [1.76]	1.01 [2.23]	0.93 [2.05]	0.97 [2.14]	0.0024 [0.0053]
125 series	40	0.86 [1.90]	1.08 [2.38]	0.99 [2.18]	1.04 [2.29]	0.0024 [0.0053]

Calculation example: For the mass of foot mounting type of 32mm bore size and 100mm stroke
0.79+(0.0015×100)=0.94kg [2.07lb.]

● Square rod cylinder

Solenoid valve	Bore size mm	Zero stroke mass				Additional mass for each 1mm [0.0394in.] stroke
		Basic type	Foot type	Flange type	Trunnion type	
062 series	25	0.53 [1.17]	0.67 [1.48]	0.61 [1.35]	0.72 [1.59]	0.0009 [0.0020]
	40	0.81 [1.79]	1.02 [2.25]	0.94 [2.07]	0.98 [2.16]	0.0021 [0.0046]
125 series	40	0.87 [1.92]	1.09 [2.40]	1.00 [2.21]	1.05 [2.32]	0.0021 [0.0046]

Calculation example: For the mass of foot mounting type of 25mm bore size and 100mm stroke
0.67+(0.0009×100)=0.76kg [1.68lb.]

- For the mass of the mounting bracket, see p.315.

Specifications

Item	Bore size mm [in.]	20, 25, 32, 40 [0.787, 0.984, 1.260, 1.575] ^{Note 1}
Operation type	Double acting type with stroke adjusting mechanism	
Media	Air	
Mounting type	Basic type, Foot type, Flange type	
Stroke adjusting range	mm [in.]	0~25 [0~0.984] (To the specification stroke)
Operating pressure range	MPa [psi.]	0.04~0.9 [6~131] (0.06~0.9 [9~131]) ^{Note 2}
Proof pressure	MPa [psi.]	1.32 [191]
Operating temperature range	°C [°F]	0~70 [32~158]
Operating speed range	mm/s [in./sec.]	30~800 [1.2~31.5] (50~800 [2.0~31.5]) ^{Note 2}
Cushion	Fixed type (Rubber bumper)	
Lubrication	Not required	
Port size	Rc	1/8

Notes: 1. Square rod cylinders are available at ϕ 25 and ϕ 40 only.
2. For push side stroke adjusting cylinders.

Bore Size and Stroke

Bore size ^{Note}	Standard strokes	Maximum stroke	Maximum available stroke	
			Push side stroke adjusting type	Pull side stroke adjusting type
20	20 50 75 100 125 150	200	400	1000
25	25 50 75 100 125 150 200	250		
32	25 50 75 100 125 150 200	300	500	
40	25 50 75 100 125 150 200 250 300	400 (300)		

Note: Square rod cylinders are available at ϕ 25 and ϕ 40 only.

Remarks: 1. Stroke tolerance $^{+1}_{0} [^{+0.039}_{0}\text{in.}]$
2. For non-standard strokes, consult us.
3. Figures in parentheses () are for cylinders with bellows.
4. The minimum operating pressure when the stroke is over the maximum stroke is 0.2MPa [29psi.].

Order Codes

DAE **20×50** — [] — [] — [] — [] — [] — []

Bore size × Stroke

Non-ion specification
Blank — Standard
NCU — Non-ion specification

Rod end accessory
Blank — No rod end accessory
I — I type knuckle
Y — Y type knuckle (with pin)
● For the cylinder joint and cylinder rod end, see p.1568.

Mounting type
Blank — Basic type
1 — Foot mounting type
3 — Flange mounting type
● Mounting brackets are included at shipping.

Number of sensor switches
1 — With 1 sensor switch
2 — With 2 sensor switches
3 — With 3 sensor switches
⋮

Lead wire length
(Applies to all except CS□F)
A — 1000mm [39in.]
B — 3000mm [118in.]

Sensor switch (for cylinders with sensor switches)
Blank — No sensor switch
ZG530 — 2-lead wire Solid state type with indicator lamp DC10~28V
ZG553 — 3-lead wire Solid state type with indicator lamp DC4.5~28V
CS3M — Reed switch type with indicator lamp DC10~30V
CS4M — Reed switch type with indicator lamp AC85~230V
CS5M — Reed switch type without indicator lamp DC10~30V
CS2F — Reed switch type with indicator lamp AC85~115V
CS3F — Reed switch type with indicator lamp DC3~30V
CS4F — Reed switch type with indicator lamp AC85~115V
CS5F — Reed switch type without indicator lamp DC3~30V

● For details of sensor switches, see p.1544.
● CS□F comes with DIN connector. All others are grommet type.

DAE — Pull side stroke adjusting type
DAP — Push side stroke adjusting type

DAEJ — Pull side stroke adjusting type with bellows
DAEJL ^{Note} — Pull side stroke adjusting type Square rod cylinder with bellows
DAEL ^{Note} — Pull side stroke adjusting type Square rod cylinder
DAJLP ^{Note} — Push side stroke adjusting type Square rod cylinder with bellows
DAJP — Push side stroke adjusting type with bellows
DALP — Push side stroke adjusting type Square rod cylinder

(Made to order)

Note: The available bore size is only ϕ 25, 40.

Inner Construction and Major Parts (cannot be disassembled)

SLIM CYLINDERS

● Push side stroke adjusting type

● Instructions for stroke adjustment
 For stroke adjustment, turn the stroke adjusting nut. After completing stroke adjustment, secure the stroke adjusting nut in place with a lock nut. If mounting a sensor switch, move the mounting location of the sensor switch along the length of the adjusted stroke.

Note: When re-adjusting the stroke, always use a wrench to loosen the stroke adjusting nut and then complete the adjustment according to the above procedure. Do not use the method of securing the piston rod in place and then loosen the lock nut.

● Pull side stroke adjusting type

● Instructions for stroke adjustment
 For stroke adjustment, turn the stroke adjusting bolt. After completing stroke adjustment, secure the stroke adjusting bolt in place with a lock nut. If mounting a sensor switch, move the mounting location of the sensor switch along the length of the adjusted stroke.

Major Parts and Materials

Parts	Bore size	20, 25, 32, 40
Cylinder tube		Stainless steel
Piston		Plastic
Piston rod		Steel (hard chrome plated)
Rod cover		Aluminum alloy (anodized)
Head cover		
Seal		Synthetic rubber (NBR)
Bumper		Plastic magnet
Magnet		
Bellows		Nylon tarpaulin (heat resistant temperature 70°C [158°F])

Seals Note: Seals cannot be replaced.

Parts	Rod seal	Piston seal
Bore mm	Quantity	2(1)
20	NY-12×8×3.5	PPY-20
25	NY-14×10×3.5	PPY-25
32	NY-17×12×4	PPY-32
40	NY-22×16×5	PPY-40

Note: Figures in parentheses () are for pull side stroke adjusting cylinder.

Mass

● Push side stroke adjusting type

Bore size mm [in.]	Zero stroke mass			Additional mass for each 1mm [0.0394in.] stroke	Mass of mounting bracket			
	Basic type	Foot mounting type	Flange mounting type		Foot bracket	Flange bracket	Y type knuckle	I type knuckle
20 [0.787]	0.29 [0.64]	0.43 [0.95]	0.37 [0.82]	0.0012 [0.0026]	0.14 [0.31]	0.08 [0.18]	0.041 [0.090]	0.036 [0.079]
25 [0.984]	0.41 [0.90]	0.57 [1.26]	0.49 [1.08]	0.0016 [0.0035]	0.16 [0.35]	0.08 [0.18]	0.075 [0.165]	0.070 [0.154]
32 [1.260]	0.57 [1.26]	0.76 [1.68]	0.67 [1.48]	0.0025 [0.0055]	0.19 [0.42]	0.10 [0.22]	0.075 [0.165]	0.070 [0.154]
40 [1.575]	0.85 [1.87]	1.14 [2.51]	0.98 [2.16]	0.0039 [0.0086]	0.29 [0.64]	0.13 [0.29]	0.120 [0.265]	0.132 [0.291]

Calculation example: For foot mounting type of 32mm bore size and 100mm stroke, 0.76 + (0.0025 × 100) = 1.01kg [2.23lb.]

● Pull side stroke adjusting type

Bore size mm [in.]	Zero stroke mass			Additional mass for each 1mm [0.0394in.] stroke	Mass of mounting bracket			
	Basic type	Foot mounting type	Flange mounting type		Foot bracket	Flange bracket	Y type knuckle	I type knuckle
20 [0.787]	0.19 [0.42]	0.33 [0.73]	0.27 [0.60]	0.0008 [0.0018]	0.14 [0.31]	0.08 [0.18]	0.041 [0.090]	0.036 [0.079]
25 [0.984]	0.27 [0.60]	0.43 [0.95]	0.35 [0.77]	0.0011 [0.0024]	0.16 [0.35]	0.08 [0.18]	0.075 [0.165]	0.070 [0.154]
32 [1.260]	0.43 [0.95]	0.62 [1.37]	0.53 [1.17]	0.0015 [0.0033]	0.19 [0.42]	0.10 [0.22]	0.075 [0.165]	0.070 [0.154]
40 [1.575]	0.66 [1.46]	0.95 [2.09]	0.79 [1.74]	0.0024 [0.0053]	0.29 [0.64]	0.13 [0.29]	0.120 [0.265]	0.132 [0.291]

Calculation example: For foot mounting type of 32mm bore size and 100mm stroke, 0.62 + (0.0015 × 100) = 0.77kg [1.70lb.]

Operating Principle

Keep

When the piston reaches the end of the stroke, and the head side is completely exhausted, spring force causes the lock piston to engage, and automatically keep the end of stroke position.

Release

Supplying compressed air to the port on the locking mechanism side pushes up the lock piston and releases the lock. When the lock is released, the by-pass air passage opens to supply compressed air to the piston side.

Mounting Location of Sensor Switch

When the sensor switch is mounted in the location shown in the diagram (figures in the table are reference values), the magnet comes to the sensor switch's maximum sensing location at the end of the stroke.

Control circuit

For control of Slim End Keep Cylinders, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of a control circuit of exhaust centers with 3-position valves or other control circuits that exhaust air from 2 delivery ports.

- Notes:
1. It is dangerous to supply air to a connection port on a side with a locking mechanism while already exhausted, because the piston rod could suddenly extend (or retract). In addition, since it could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side to ensure that back pressure is applied.
 2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to the connection port on the opposite side of the locking mechanism.

Manual operation

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M3 × 0.5 (M2.5×0.45 for $\phi 16$) screw that has 30mm [1.18in.] below head length into the opening for manual override, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.

- Notes:
1. It is dangerous to release the lock when a load (weight) is present on the piston rod, because it may cause a sudden fall or cause the unintended piston rod's extension (or retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
 2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.

General precautions

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.
Collected liquid or dust entering the cylinder may cause improper operation.

Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent.
Avoid using spindle oil or machine oil.

Atmosphere

1. Because water, oil, dust, etc., entering the opening for manual override may cause defective locks or other erratic operation. If using in locations subject to dripping water, dripping oil etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

Notes: 1. The body is for common use. For details, see the Handling Instructions and Precautions on p.369.

2. Do not use lubrication.

3. For the case where cylinder speed is 300mm [11.8in./sec.], pressure is 0.5MPa [73psi.], and the load ratio is 25%. For details, see the Handling Instructions and Precautions on p.369.

Bore Size and Strokes

Bore size	Standard strokes	Maximum stroke		Maximum available stroke	
		No bellows	With bellows	No bellows	With bellows
		20	25 50 75 100 125 150	200	
25	25 50 75 100 125 150 200	250			
32	25 50 75 100 125 150 200	300			
40	25 50 75 100 125 150 200 250 300	400	300		

Remarks: 1. Stroke tolerance $^{+1}_0$ [$^{+0.039}_{0}$ in.]

2. For non-standard strokes, consult us.

3. The minimum operating pressure when the stroke is over the maximum stroke is 0.2MPa [29psi.].

Order Codes

DA R 20×50 — — — — — — — —

DA — Slim double acting cylinder
R — Bellows
Blank — No bellows
J — With bellows (Made to order)
20×50 — Bore size × Stroke
Brake cylinder
 — Rod end accessory
Blank — No rod end accessory
I — I type knuckle
Y — Y type knuckle (with pin)
● For the cylinder joint and cylinder rod end, see p.1568.
 — Mounting type
Blank — Basic type
1 — Foot mounting type
3 — Flange mounting type
8E — Pivot mounting type with supporting bracket (with pin)
11 — Head trunnion type
11-11T — Head trunnion type with supporting bracket
● Mounting brackets are included at shipping.
 — Head cover specification
Blank — Standard head

1 — With 1 sensor switch
2 — With 2 sensor switches
3 — With 3 sensor switches
⋮ — ⋮
Lead wire length (Applies to all except **CS□F**)
A — 1000mm [39in.]
B — 3000mm [118in.]
Sensor switch (for cylinders with sensor switches)
Blank — No sensor switch
ZG530 — 2-lead wire Solid state type with indicator lamp DC10~28V
ZG553 — 3-lead wire Solid state type with indicator lamp DC4.5~28V
CS3M — Reed switch type with indicator lamp DC10~30V
CS4M — Reed switch type with indicator lamp AC85~230V
CS5M — Reed switch type without indicator lamp DC10~30V
CS2F — Reed switch type with indicator lamp AC85~115V
CS3F — Reed switch type with indicator lamp DC3~30V
CS4F — Reed switch type with indicator lamp AC85~115V
CS5F — Reed switch type without indicator lamp AC85~230V
● For details of sensor switches, see p.1544.
● **CS□F** comes with DIN connector. All others are grommet type.

Inner Construction (cannot be disassembled)

The diagram shows the brake release state.

Major Parts and Materials

No.	Parts	Materials
①	Cylinder tube	Stainless steel
②	Piston	Plastic
③	Piston rod	Steel (hard chrome plated)
④	Rod cover	Aluminum (anodized)
⑤	Head cover	
⑥	Piston seal	Synthetic rubber (NBR)
⑦~⑨	Rod seal	
⑩~⑬	O-ring	
⑭	Bumper	
⑮	Magnet	Plastic magnet
⑯	Rod bushing	Oil impregnated bronze sintered alloy
⑰	Brake head	Aluminum (anodized)
⑱	Brake piston	Special steel (heat-treated)
⑲	Collet	
⑳	Steel ball	High carbon steel
㉑	Brake shoe	Special brake lining (copper sintered material)
㉒	Brake shoe holder	Special steel (heat-treated)
㉓	Holder	
㉔	Guide	Aluminum alloy
㉕	Spring	Piano wire (zinc plated)
㉖~㉗	Wear ring	Plastic
㉘	Brake release screw	Mild steel (zinc plated)
	Bellows	Nylon tarpaulin (heat resistant temperature 60°C)

Operating Principle

Brake operation

When air is exhausted from chamber A, brake piston ⑱ is moved by spring ㉕ to the right, steel ball ⑳ in contact with the tapered section inside of brake piston ⑱ is pushed to the inner side, and collet ⑲ works as a lever with holder ㉓ and brake shoe holder ㉒ as a pivot point. This action presses brake shoe ㉑ to tighten the piston rod and activate the brake.

Brake release

When air is supplied to chamber A, brake piston ⑱ moves to the left against spring ㉕, steel ball ⑳ is separated from the tapered section inside of brake piston ⑱, and collet ⑲ expands and brake shoe ㉑ spreads to release the piston rod and disengage the brake.

Seals

Note: Seals cannot be replaced.

Mounting and piping

Control circuit

Electric control

When using a sequencer for control, the scanning time of the sequencer will affect the stopping position error. To improve the stopping position accuracy, use a TTL circuit, etc., to directly control the signal from the cylinder's sensor switch, and operate the valve.

Pneumatic circuit

- To achieve a balance with the load, and a balance of differences in rod diameter area, always use a regulator with check valve. Regulators we recommend include the F.R.L. multi series **R152**, the manifold regulator **MR102**, or the solenoid valve 180 series sub-base regulator -54 (for single unit order code: **M020014**).
- For the cylinder control solenoid valve (V1), use a pressure center type 3-position solenoid valve (**113-4E2-14**, **183-4E2-14**), etc.
- Install the solenoid valve for brake (V2) as close to the cylinder as possible. Moreover, using a DC current solenoid valve will improve response (repeatability).

Standard circuit

● Horizontal mounting Spring lock

Spring assisted air pressure lock

Regulator pressure setting

$$P2 = \frac{D^2 - d^2}{D^2} \cdot P1$$

D : Cylinder bore (mm)
d : Rod diameter (mm)
P1 : Supply pressure (MPa)

$$P2' = \frac{D'^2 - d'^2}{D'^2} \cdot P1'$$

D' : Cylinder bore [in.]
d' : Rod diameter [in.]
P1' : Supply pressure [psi.]

● Vertical mounting Spring lock

Spring assisted air pressure lock

Regulator pressure setting

$$P2 = \frac{\pi (D^2 - d^2) P1 - 4W}{\pi \cdot D^2}$$

D : Cylinder bore (mm)
d : Rod diameter (mm)
P1 : Supply pressure (MPa)
W : Load (N)

$$P2' = \frac{\pi (D'^2 - d'^2) P1' - 4W'}{\pi \cdot D'^2}$$

D' : Cylinder bore [in.]
d' : Rod diameter [in.]
P1' : Supply pressure [psi.]
W' : Load [lbf]

● Vertical mounting (push up) spring assisted air pressure lock

Regulator pressure setting

$$P2 = \frac{\pi \cdot D^2 \cdot P1 - 4W}{\pi (D^2 - d^2)}$$

D : Cylinder bore (mm)
d : Rod diameter (mm)
P : Supply pressure (MPa)
W : Load (N)

$$P2' = \frac{\pi \cdot D'^2 \cdot P1' - 4W'}{\pi (D'^2 - d'^2)}$$

D' : Cylinder bore [in.]
d' : Rod diameter [in.]
P' : Supply pressure [psi.]
W' : Load [lbf]

Solenoid ON, OFF switching sequence
(same for all applications)

Valve Operating status	V1			V2
	SOL1	SOL2	SOL3	
Intermediate stop	OFF	OFF	OFF	
Extend	OFF	ON	ON	
Retract	ON	OFF	ON	

Handling Instructions and Precautions

Mounting and piping

Brake mechanism

Manual operation

- **Brake release**
Apply 0.3~0.9MPa [44~131psi.] air pressure to the brake release port, then use a small screwdriver, etc., to thread the brake lock releasing screw in the clockwise direction until the screw thread disappears.
- **Brake operation**
To again operate the brake, apply 0.3~0.9MPa [44~131psi.] air pressure to the brake release port, then use a small screwdriver, etc., to return the brake lock releasing screw in the counterclockwise direction until the screw comes to a stop.
- **Brake release**
For safety, the brake lock releasing screw is designed to be immovable if no air has been applied to the brake release port.

Spring assisted air pressure lock

- To increase the holding force, use a screwdriver, etc., to remove the filter on the brake pressurizing port and use it as a connection port for spring assisted air pressure type brake.
- While using a spring assisted air pressure brake will approximately double the holding force, too much pressure on the brake pressurizing port could reduce the durability of the brake mechanism. For this reason, always maintain air pressure in the pressurizing port within a range of 0.34~0.50MPa [49~73psi.] when using a 4 way valve to switch between the brake release port and the pressurizing port.

Stopping position accuracy

1. Stopping position accuracy (repeatability) shown in the specifications table is for initial conditions. This can change over time as the piston rod grease deteriorates, and as wear on the brake shoe and piston rod progresses.
 2. The stopping position accuracy can vary in accordance with cylinder speed, control circuit delay time (sequencer scanning time, etc.), fluctuation in brake valve (V2) operating time, piping length, and piping diameter, etc.
 3. To improve the stopping position accuracy, install a pressure reducing valve to ensure there are no pressure fluctuations in the media.
 4. Use the brake cylinder within the allowable kinetic energy range.
- Fluctuations in cylinder stopping time arising during the sequencer's scanning time (or circuit operating time).
 - Allowable kinetic energy when locked

- Examples: 1. A brake cylinder operated at a scanning time of 10ms (which will vary according to the sequencer and the number of program steps) and a cylinder speed of 300mm/s [11.8in./sec.] will cause a fluctuation of 3mm [0.118in.].
2. When 10ms is required for the response time of relays, etc., at least 3mm [0.118in.] of operating distance is required for the sensor. (When the cylinder speed is 300mm/s [11.8 in./sec.]

Note: Use the brake cylinder within the allowable kinetic energy range.

Handling Instructions and Precautions

Sensor switch mounting location

For moving sensor switch, see p.419.
Since dimensions for the mounting location will vary, see the table below.

● Mounting location of end of stroke detection sensor switch

Sensor switch model	Bore size mm [in.]	20	25	32	40
		[0.787]	[0.984]	[1.260]	[1.575]

	B	22 [0.866]	22 [0.866]	22 [0.866]	22 [0.866]

General precautions

Media

1. Air used in the brake cylinder should be clean air that contains no lubrication. Use of lubrication or humidified air could cause the grease inside the braking mechanism to wash out, which could later result in rapid wear on the braking mechanism caused by the consequent shortage of lubrication, etc.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically. Collected liquid or dust entering the cylinder may cause improper operation.

Maintenance

If the above basic precautions are observed, the brake cylinder can be used maintenance-free for a long period of time.

Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

Application Examples

The piston rod locking

Use low pressure to press down cathode-ray tubes, etc., and then lock.

[To hold in place glass products, plastic, and other easily deformable items.]

- Cathode-ray tube manufacturing line
- Injection machine peripheral devices
- Tire production line

Prevention of falls in intermediate positions

The load is locked in place to prevent damage to work, etc., even when air pressure drops suddenly due to power failures, etc.

[Used for working operations which are set in intermediate positions.]

- Pick and place
- FMS (multi-item, small-lot production) conveyor line
- Automatic packaging machine

Multi-point operations

Spot welding at multiple points.

Workpiece switching

Select the products, and classify into several categories.

Fixture replacement

Move fixture to desired device.

- Spot welding machine
- Metal mold exchange
- Automatic chuck exchange

Bore size × Stroke

Block square rod cylinder

Slim double acting cylinder

Number of sensor switches
 1 — With 1 sensor switch
 2 — With 2 sensor switches
 3 — With 3 sensor switches
 ⋮ — ⋮

Lead wire length
 (Applies to all except **CS□F**)
A — 1000mm [39in.]
B — 3000mm [118in.]

Rod end accessory
Blank — No rod end accessory
I — I type knuckle
Y — Y type knuckle (with pin)
 ● For the cylinder joint and cylinder rod end, see p.1568.

Mounting type
2 — Side mount
4 — Front mount

Sensor switch (for cylinders with sensor switches)
Blank — No sensor switch
ZG530 — 2-lead wire Solid state type with indicator lamp DC10~28V
ZG553 — 3-lead wire Solid state type with indicator lamp DC4.5~28V
CS3M — Reed switch type with indicator lamp DC10~30V
CS4M — Reed switch type with indicator lamp AC85~230V
CS5M — Reed switch type without indicator lamp DC10~30V
CS2F — Reed switch type with indicator lamp AC85~115V
CS3F — Reed switch type with indicator lamp DC3~30V
CS4F — Reed switch type with indicator lamp AC85~230V
CS5F — Reed switch type without indicator lamp DC10~30V
 DC3~30V

● For details of sensor switches, see p.1544.
 ● **CS□F** comes with DIN connector.
 All others are grommet type.

Inner Construction and Major Parts (cannot be disassembled)

● $\phi 20 \sim \phi 40$

● $\phi 50, \phi 63$

Major parts and Materials

Parts	Bore size	20~40	50, 63
Cylinder tube		Stainless steel	
Piston		Plastic	
Piston rod		Steel (hard chrome plated)	
Rod cover		Aluminum (anodized)	
Head cover		Aluminum (anodized)	
Seal		Synthetic rubber (NBR)	
Bumper		Synthetic rubber (NBR)	—
Magnet		Plastic magnet	
I type knuckle		Mild steel (zinc plated)	
Y type knuckle		Mild steel (zinc plated)	

Seals

Note: Seals cannot be replaced.

Parts	Rod seal	Piston seal	Cushion seal	Cushion gasket	
Bore mm	Quantity	1	2	2	2
20	KC-7.4	PPY-20	—	—	
25	KC-7.4	PPY-25	—	—	
32	KC-10	PPY-32	—	—	
40	KC-13	PPY-40	—	—	
50	KC-13	PGY-50	PCS-20	DT-1-5	
63	KC-13	PGY-63	PCS-20	DT-1-5	

Mass

Bore size mm [in.]	Zero stroke mass		Additional mass for each 1mm [0.0394in.] stroke
	Side mount	Front mount	
20 [0.787]	0.15 [0.33]	0.14 [0.31]	0.0008 [0.0018]
25 [0.984]	0.21 [0.46]	0.18 [0.40]	0.0009 [0.0020]
32 [1.260]	0.40 [0.88]	0.33 [0.73]	0.0014 [0.0031]
40 [1.575]	0.66 [1.46]	0.49 [1.08]	0.0021 [0.0046]
50 [1.969]	1.15 [2.54]	0.90 [1.98]	0.0027 [0.0060]
63 [2.480]	1.62 [3.57]	1.26 [2.78]	0.0032 [0.0071]

Calculation example: For the mass of side mount type of 40mm bore size and 100mm stroke
 $0.066 + (0.0021 \times 100) = 0.87\text{kg} [1.92\text{lb.}]$

Handling Instructions and Precautions

Control circuit

For control of Slim End Keep Cylinders, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of a control circuit of exhaust centers with 3-position valves or other control circuits that exhaust air from 2 delivery ports.

- Notes: 1. It is dangerous to supply air to a connection port on a side with a locking mechanism while already exhausted, because the piston rod could suddenly extend (or retract). In addition, since it could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side to ensure that back pressure is applied.
2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to the connection port on the opposite side of the locking mechanism.

Manual operation

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M3 × 0.5 (M2.5×0.45 for φ16) screw that has 30mm [1.18in.] below head length into the opening for manual override, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.

- Notes: 1. It is dangerous to release the lock when a load (weight) is present on the piston rod, because it may cause a sudden fall or cause the unintended piston rod's extension (or retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.

General precautions

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.
Collected liquid or dust entering the cylinder may cause improper operation.

Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.

Atmosphere

1. Because water, oil, dust, etc., entering the opening for manual override may cause defective locks or other erratic operation. If using in locations subject to dripping water, dripping oil etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

CS4F — Reed switch type with indicator lamp DC3~30V
CS5F — Reed switch type without indicator lamp DC3~30V

● For details of sensor switches, see p.1544.
 ● CS□F comes with DIN connector.
 All others are grommet type.

● **About stroke 1 and stroke 2**

Stroke 1 is the stroke of cylinder 1.
 Stroke 2 is obtained by subtracting stroke 1 from the stroke of cylinder 2.

SLIM CYLINDERS

Operation of Tandem Cylinders

Tandem Cylinders are a set of 2 cylinders joined end to end. It can be used as a 2-stage stroke cylinder by supplying air to either Port A or Port B. It can also obtain twice the thrust within the "stroke 1" range.

The rod retracts stroke 2 and stroke 1 when air is supplied from Port C.

The rod moves stroke 1 when air is supplied from Port A.

The rod moves stroke 2 when air is supplied from Port B.

Twice the thrust is obtained within the stroke 1 range when air is supplied from Ports A and B.

Inner Construction and Major Parts (cannot be disassembled)

Major Parts and Materials

Parts	Bore size	20~40
Cylinder tube		Stainless steel tube
Piston		Plastic
Piston rod		Steel (hard chrome plated)
Rod cover		Aluminum (anodized)
Head cover		
Connecting cap		
Seal		Synthetic rubber (NBR)
Bumper		
Magnet		Plastic magnet
Filter		Foamed metal

Seals

Note: Seals cannot be replaced.

Operation of Dual Stroke Cylinders

Dual Stroke Cylinders are a set of 2 cylinders connected back to back.
 The cylinder body can be secured in place and each stroke can be controlled separately. It can also be used to obtain 2-stage or 3-stage strokes by securing the piston rod on one side in place.

The rods retract stroke 2 and stroke 1 when air is supplied from Ports (A) and (D).

The rod moves stroke 1 when air is supplied from Ports (B) and (D).

The rod moves stroke 2 when air is supplied from Ports (A) and (C).

The rod moves stroke 1 and stroke 2 when air is supplied from Ports (B) and (C).

OPTIONAL ROD END SHAPE PATTERNS

Use an order form of rod end pattern and fill the items on the selected one from among 28 types of optional patterned shapes to obtain made-to-order cylinders of non-standard rod end shapes.

The shapes can be applied to the entire Slim cylinders series with the exception of square rod cylinders and cylinders with bellows. For the order form containing the optional patterned shapes, consult us.

Order Codes

Piston Rod End Shape Pattern Diagram (28 Types)

SENSOR SWITCHES

Solid State Type, Reed Switch Type

- Since a magnet is already standard on the Slim cylinders series^{Note}, mounting a sensor switch will enable use in sensor switch applications.

Note: Except the heat resistant specification cylinder.

Symbol

Order Codes

- Order codes for sensor switches mounted on the Slim cylinders

Sensor switch			
ZG530	Solid state type	For $\phi 16 \sim \phi 63$ with indicator lamp	DC10~30V
ZG553	Solid state type	For $\phi 16 \sim \phi 63$ with indicator lamp	DC4.5~28V
CS3M	Reed switch type	For $\phi 16 \sim \phi 63$ with indicator lamp	DC10~30V
CS4M	Reed switch type	For $\phi 16 \sim \phi 63$ with indicator lamp	AC85~230V
CS5M	Reed switch type	For $\phi 16 \sim \phi 63$ without indicator lamp	DC10~30V
CS2F	Reed switch type	For $\phi 20 \sim \phi 63$ with indicator lamp	AC85~115V
CS3F	Reed switch type	For $\phi 20 \sim \phi 63$ with indicator lamp	DC3~30V
CS4F	Reed switch type	For $\phi 20 \sim \phi 63$ with indicator lamp	AC85~115V
CS5F	Reed switch type	For $\phi 20 \sim \phi 63$ without indicator lamp	AC85~230V
			DC10~30V
			DC3~30V

- Order codes for sensor switch only

- Order codes for mounting strap only

Minimum Cylinder Strokes When Using Sensor Switches

Sensor switch model	Bore size	2 pcs. mounting		1 pc. mounting
		mm		
		Along a straight line	In staggered positions	
ZG530	16	20	10	10
ZG553	20~63	20	10	10
CS□M	16~63	20	15	15
CS□F	20~63	40	21	15

● Two pieces mounting ● One piece mounting

● When mounted in-line

● When mounted in staggered positions

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range : ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential : C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

Remark: Figures in the table above are reference values.

Notes: 1. Figures are lengths measured from the switch's opposite end side to the lead wire.

2. Figures are lengths measured from the connector side's end surface to the lead wire.

Mounting Location of End of Stroke Detection Sensor Switch

When the sensor switch is mounted in the location shown in the diagram (figures in the table are reference values), the magnet comes to the sensor switch's maximum sensing location at the end of the stroke.

Moving Sensor Switch

- ZG530
- ZG553
- CS M

- Loosening the mounting screw allows the sensor switch to be moved freely along with the strap in the axial and circumferential direction. The sensor switch alone cannot be moved.
- To remove the sensor switch from the strap, first detach the strap from the cylinder tube and then remove the sensor switch from the strap.
- Tighten the mounting screw with a tightening torque of 49N·cm [4.3in·lbf].

- CS F

- Loosening the mounting screw allows the sensor switch to be moved freely in the axial and circumferential direction.
- Slightly loosening the mounting screw allows fine adjustment of the lead switch only, up to 5mm [0.2in.] in the axial direction. Tighten the mounting screw with a tightening torque of 68.6N·cm [6.1in·lbf].

Dimensions of Sensor Switch (mm)

- ZG530
- ZG553
- CS M

φ 16

Lead wire length
A: 1000mm [39in.]
B: 3000mm [118in.]

φ 20 ~ φ 63

Lead wire length
A: 1000mm [39in.]
B: 3000mm [118in.]

		mm [in.]	
Bore	Code	A	B
16	[0.630]	16	15
20	[0.787]	19	17
25	[0.984]	20.5	17.5
32	[1.260]	25	19
40	[1.575]	29	—*
50	[1.969]	34	—*
63	[2.480]	41	—*

* At φ 40 or larger, dimension B is the radius of the cylinder tube. Therefore, the protrusion in the B direction of the mounting section disappears.
