The Pen Cylinder's compactness and easy handling make production lines in a broad range of industries. A new release with even lighter weight and more

# PEN CYLINDERS

The Koganei Pen Cylinders, opening new actuator territory with their stainless steel tubes, are more user-friendly than ever in this new market release!

## Product series extended even more!

$\phi$  2.5,  $\phi$  4 Single Acting Push Type

Optimum for more compact device designs.

Non-rotating Type

Offers 3 types of non-rotating operation types.

## A Further 30% Weight Reduction

The brass parts for the both end covers and elsewhere have been changed to an aluminum alloy, achieving a 30% weight reduction from the earlier product.

(Double acting type, φ10, 60mm stroke: Previous product weighs 55g [1.94oz.], current Pen Cylinder weighs 33g [1.16oz.]

## Mounting is Straightforward and Easy

The shape of the end covers has been changed from round to square, allowing easy mounting with a wrench.

## 4mm Square Sensor Switch

Uses a 4mm [0.157in.] square sensor switch, optimum for saving space in the overall device.

Note: Not available with the φ2.5, φ4 single acting push types.

## 10% More Compact

Reduced body dimensions achieves space savings overall, and greater compactness in the user's device.

(For double acting type at φ10, and with 60mm stroke of cylinder with magnet)

Previous Pen Cylinders

## Wear Resistance Up 200%

The rod bushing uses a special aluminum alloy with superior wear resistance. Cylinder life has been improved by 200% over the previous model.

## Conforms to Non-ion as Standard

Can be used on cathode-ray tube (CRT) manufacturing lines, etc., since copper materials<sup>Note</sup> are not used.

(Note: A portion of the materials used in the cylinders with speed controllers is to be nickel-plated.)

## Handling Instructions and Precautions

### General precautions

#### Mounting

Tighten the mounting nuts to the recommended tightening torques shown below.

Thread size mm	Recommended tightening torque N·cm [in·lbf]
M6×1	240 [21]
M8×1	600 [53]
M10×1	1200 [106]

#### Piping to single acting type cylinders

Piping directly to single acting type cylinders for air supply can cause the unit to exceed the speed range, and damage the cylinder. Always use a speed controller with meter-in control to ensure that the speed range can ensure the allowable kinetic energy or less.

#### Media

1. Always thoroughly blow off (use compressed air) the tubing before piping. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
2. Use air for the media. For the use of any other media, consult us.
3. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 µm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.  
Collected liquid or dust entering the cylinder may cause improper operation.

#### Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.

#### Atmosphere

If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.

# Cylinder Thrust

Select a suitable bore size considering the load and air pressure to obtain the required thrust. Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio =  $\frac{\text{Load}}{\text{Calculated value}}$ ) of 70% or less (50% or less for high speed application).

PEN CYLINDERS

## Allowable Kinetic Energy

Pen cylinders include a cushioning mechanism. This mechanism is intended to reduce as much as possible the impact of pistons with high kinetic energy when they stop at the end of the stroke. There are 2 types of cushions, as shown below.

### ● Rubber bumpers (Standard equipment)

Rubber bumpers installed on both sides of the piston soften the impact at the end of the stroke, and absorb the impact noise during stopping, in response to high-frequency and high-speed operations. Note that a certain amount of rebound will occur at the end of the stroke on the cylinder with the rubber bumpers.

### ● Variable cushions

Use variable cushions for large load or high-speed operations that rubber bumpers cannot adequately absorb. The impact is absorbed by compressing air, when the piston stops at the end of the stroke. Since the cushioning stroke is included within the cylinder stroke, be careful to ensure that the cushioning is not performed excessively during cylinder applications of 25mm strokes or less. An excessive cushioning can result in too much time for each stroke, reducing efficiency. When operated at or below the absorbable kinetic energy shown in the table below, the cushion seal life is 1 million operations or more.

The kinetic energy of load can be obtained through the formulas shown below.

$E_x = \frac{m}{2} v^2$	$E'_x = \frac{W}{2g} v'^2$
Ex: Kinetic energy (J)	E'x: Kinetic energy [ft·lbf]
m: Load mass (kg)	W: Load [lbf.]
v: Piston speed (m/s)	v': Piston speed [ft./sec.]
	g: Acceleration of gravity 32.2 [ft./sec. <sup>2</sup> ]

### Operating speed range

- Variable cushion .....100~1000mm/s [3.9~39.4in./sec.]

#### How to read graphs

From Graph 1, φ 16 [0.630in.] with rubber bumpers is selected where the load is 1kg [2.2lb.] and the maximum operating speed is 90mm/s [3.54in./sec.].  
From Graph 2, φ 16 [0.630in.] with variable cushion is selected where the load is 2kg [4.4lb.] and the maximum operating speed is 400mm/s [15.7in./sec.].

Remark : Includes mounting nut and rod end nut.

For the mass of the double foot bracket, add double the mass of the single foot bracket listed above.

Notes: 1. With supporting bracket and pin.

2. Same for all sensor switch models (ZC253□, ZC230□, ZC201□, ZC205□).

Calculation example: The mass for 2 units of ZC253A, with a double acting type cylinder with magnet with single foot bracket, bore size of 10mm, and stroke of 45mm, is  $29.5 + 7 + 1 + 40 = 77.5g [2.734oz.]$ .

## Specifications

Item	Bore size mm [in.]	2.5 [0.098]	4 [0.157]
Operation type		Single acting push type	
Media		Air	
Mounting type		Basic type	
Operating pressure range MPa [psi.]		0.34 ~ 0.7 [49 ~ 102]	
Proof pressure MPa [psi.]		1.05 [152]	
Operating temperature range °C [°F]		0 ~ 60 [32 ~ 140]	
Operating speed range mm/s [in./sec.]		50 ~ 300 [2.0 ~ 11.8] (In applications with high load ratio or high speed, use externally mounted stoppers.)	
Cushion		None	
Lubrication		Not required	
Minimum operating pressure MPa [psi.]		0.34 [49]	
Port size		$\phi$ 4 $\times$ $\phi$ 2.5 Barb fitting for nylon and urethane tubes is equipped with the head cover.	

Remark: Cylinders with bore size  $\phi$  2.5 are sold in packs of 5.

## Handling Instructions and Precautions (Non-rotating Cylinders)

1. To mount the cylinder body in place, first secure the rod cover, and then tighten the mounting nuts to the recommended torque shown below.

Bore size mm [in.]	Recommended tightening torque N·cm [in·lbf]
<b>10 [0.394]</b>	600 [53]
<b>16 [0.630]</b>	1200 [106]

2. For non-rotating cylinders, avoid applying rotation torque to the piston rod. The bushing section will become deformed and non-rotating accuracy will deteriorate.
3. For single acting cylinders, avoid applying loads while returning by spring force. Spring inside the cylinder could not make return the carrying work to the end of stroke.

- Notes: 1. The low hydraulic cylinder is recommended to be used with oil on both sides. The use of oil on one side and air on the other side could result in imprecise speed control, and oil could leak across to the air side. In addition, use meter-out control for the speed control.
2. Do not use nonflammable hydraulic fluid, machine oil, or spindle oil.
3. Be aware that changes in oil temperature can alter the speed.
4. When using the reed switch type sensor, maintain a minimum speed of 30mm/s [1.2in./sec.] or more.

## Operation of Dual Stroke Cylinders

Dual Stroke Cylinders are a set of 2 cylinders connected back to back. The cylinder body can be secured in place and each stroke can be controlled separately. It can also be used to obtain 2-stage or 3-stage strokes by securing the piston rod on one side in place.

## Operation of Tandem Cylinders

Tandem Cylinders are a set of 2 cylinders joined end to end. It can be used as a 2-stage stroke cylinder by supplying air to either Port A or Port B. It can also obtain twice the thrust within the "stroke 1" range.

## Example of Air Circuit for Tandem Cylinders

See the following air circuit when using the tandem cylinder as a 2-stage stroke cylinder.

Remark : Includes mounting nut and rod end nut. The clevis mounting type does not include mounting nut.  
For the mass of the double foot bracket, add double the mass of the single foot bracket listed above.

Notes: 1. With supporting bracket and pin.

2. Same for all sensor switch models (ZC253□, ZC230□, ZC201□, ZC205□).

Calculation example: The mass for 2 units of ZC253A, with a double acting cylinder with magnet with single foot bracket, bore size of 10mm, and stroke of 45mm, is 36 + 7 + 1 + 40 = 84g [2.96oz.].

## Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

### ● Operating range: $\ell$

The distance the piston travels in one direction, while the switch is in the ON position.

### ● Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

## Mounting Sensor Switch by Strokes

### ● 5mm stroke

### ● 10mm stroke

### Position of sensor holder, and how to adjust it

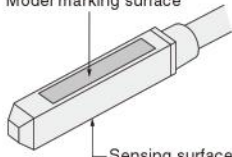

- The sensor holder cannot be installed at the center of the sensor switch when mounting 2 sensor switches on a 5mm stroke cylinder.
- When mounting 2 sensor switches on a 5mm stroke cylinder, loosen the mounting screw and move the sensor switch until the sensor holder is in the position shown in the diagram, and install it in the specified position.
- For 10mm strokes or more, install the sensor holder so that it is approximately in the center of the sensor switch, as shown in the diagram.

## Moving Sensor Switch

- Loosening the mounting screw allows the sensor switch to be moved either along the axial or circumference direction of the cylinder.
- When making fine adjustments of the sensor switch along the axial direction, a very slight loosening of the mounting screw (about one-half turn) is enough to allow the sensor switch to be moved.
- Tighten the mounting screw with a tightening torque of 0.3N·m [2.7in·lbf] or less.

### ● Caution when installing cylinder with sensor switch

In the ZC type sensor switches, the opposite side from the model marking surface is the sensing surface side. Mount it so that the cylinder magnet comes to the sensing surface side.
