JIG CYLINDERS WITH GUIDES $\phi 12 \sim \phi 63$

Caution

Before use, be sure to read the "Safety Precautions" on p. 57.

Square, thin body allows selection of mounting and piping direction, and expands flexibility of device design.

JIG CYLINDERS WITH GUIDES

$\phi 12 \sim \phi 63$

■ Select guide rod bearing according to application

Wide range includes scraper specification to prevent dust from entering.

1. Slide bearing type

Superior wear resistance makes it optimum for stopper or other devices needing resistance to lateral loads with shocks.

2. Rolling bearing type

Smooth operation with high precision makes it optimum for pushers and lifters.

■ Enables piping from 2 directions

Rational device design allows selection of piping location according to the mounting environment. In addition, the piping for dust collection ports used in cylinders for clean systems can also be approached from 2 directions.

■ Cylinders for clean systems also in line-up

Cleanliness rating corresponds to Class 5 (FED-STD209E Class 100 equivalent) (according to Koganei test standards).

■ Slender-figured sensor switch

Magnets for sensor switches are standard on all models. Embedded shape avoids protrusion of switches, to simplify mounting in tight spaces.

■ End keep cylinder also available

End keep mechanism supports stable operation in the vertical direction to prevent workpiece from falling caused by shut off in the air supply or any decrease of air pressure.

■ Four types of mounting possible

■ Non-ion as a Standard

Can be used on Cathode-ray tube (CRT) manufacturing lines, etc., since copper materials are not used. (Except cylinders for clean systems)

Slim & Compact shape
JIG CYLINDERS WITH GUIDES
 Optimum for conveyor line stoppers or lifters.
 Moreover, end keep mechanism
 for greater use!

SQUARE FLEXIBLE POWERFUL

■ Standard Cylinders

■ Stroke Adjusting Cylinders

■ End Keep Cylinders

● Stroke Adjusting Cylinders

Adjusting rod can be used to adjust the range of the push-side stroke by 0~10mm [0~0.394in.].

● End Keep Cylinders

Flat shape prevents the keep portion from protruding from the side surface, to allow easy mounting in tight spaces.

■ Cylinders for Clean Systems

■ Sensor Switches

Application example

JIG CYLINDERS WITH GUIDES $\phi 12 \sim \phi 63$

Handling Instructions and Precautions

Mounting

1. While any mounting direction is allowed, the mounting surface should always be flat. Twisting or bending during mounting may disturb the accuracy and may also result in air leaks or improper operation.
2. Care should be taken that scratches or dents on the cylinder's mounting surface may damage its flatness.
3. The hexagon socket head bolt on the rod end plate has been secured with adhesive. Always confirm that the rod end plate and hexagon socket head bolts are secured before using the cylinder.
4. In applications subject to large shocks, reinforcing the bolt mounting, by installing a support to the cylinder body for example, is recommended.
5. Ensure that the mounting bolts for the cylinder body and end plate are sufficiently strong.
6. Take preventive measures when shocks or vibrations might loosen the bolts.
7. Do not leave scratches or dents in the areas where the piston rod and the guide rod contact. It could result in damage to the seal or in air leaks.
8. The piston rod and guide rod are coated with grease. Do not wipe it off, as it may result in improper operation. Apply grease if no lubrication is visible.
Grease: General type; Lithium grease No. 2

Sensor switch

The magnet for sensor switches is built into the cylinder. Mounting sensor switch will enable use in sensor switch applications.

Caution: For the sensor switch mounting location and moving instructions, see p.734.

Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.
2. Do not use the cylinder in ambient atmospheres that could result in corrosion. Application in this kind of environment may result in damage or in improper operation.
3. Do not use in extremely dry conditions.
4. The most desirable temperature range for cylinders is 5~60°C [41~140°F]. Do not use in condition where temperatures exceed 60°C [140°F], as it could result in damage or in improper operation. In addition, since the moisture content at temperatures below 5°C [41°F] could freeze, resulting in damage or in improper operation, care should be taken to prevent freezing.

General precautions

1. Always thoroughly blow off (use compressed air) the tubing before piping. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
2. Air used for the cylinder should be clean air that contains no deteriorated compressor oil, etc. Install an air filter (filtration of a minimum 40 µm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically. Collected liquid or dust entering the cylinder may cause improper operation.
3. The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.

When in use

1. Do not place hands, etc., in the cylinder's operating range.
2. Pay full attention to the cylinder operating direction during set up.
3. Care should be taken to avoid trapping body or fingers between the cylinder body and the end plate when the cylinder retracts.
4. Confirm that no residual pressure remains inside the cylinder before commencing maintenance.
5. In its application as a stopper, it is assumed that the carried objects will be cardboard boxes, plastic cases, etc. In cases where steel and other metal blocks are carried, select a sufficiently margined safer product or take measures to fully absorb the impacts.
6. Use the cylinder at speed of 500mm/s [19.7in./sec.] or less. But when the speed and loads are high even within the allowable ranges, install an external stopper, etc., to ensure that the cylinder is not exposed to direct shocks.
7. Do not use **SGDA□Q** (rolling bearing type) as a stopper.

Handling Instructions and Precautions

Control circuit for the end keep cylinder

1. For control of the Jig End Keep Cylinder with Guide, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of control circuit with ABR connection (exhaust center) 3-position valves that exhaust air from 2 delivery ports.
2. Always use meter-out control for speed control. Meter-in control may result in failure of the locking mechanism to release.

- Cautions:**
1. It is dangerous to supply air to a connection port on a side with a locking mechanism while the cylinder has already been exhausted, because the piston rod may suddenly extend (or retract). In addition, since the lock piston could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side of the locking mechanism to ensure applying back pressure.
 2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to a connection port on the opposite side of the locking mechanism.
 3. Connect the valve port A (NC) to the connection port on the side with the locking mechanism.

Manual operation of locking mechanism

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M3×0.5 (φ 12, 16 is M2.5×0.45) screw that has 30mm [1.18in.] screw length into the opening for manual override, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.

- Cautions:**
1. It is dangerous to release the lock when load (weight) is present on the piston rod, because it may cause the unintended piston rod's extension (or retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
 2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
 3. Water, oil, dust, etc., intruding through the opening for manual override may be a cause of defective locks or other erratic operation. If using in locations subject to dripping water, dripping oil, etc., or large amounts of dust, use a cover to protect the unit.

Precautions for Mounting of Fittings

- In the installation shown in the diagram below, be aware of the fitting outer diameter.

- ※ Positions A and B are dimensions of the port location closer to the end surface of the body.

- In products with a stroke of 10mm, be aware of the P dimension when using the side ports.

Bore size	Port size	mm [in.]		
		Port location	Fitting outer diameter	
		A	B	φ C
12 [0.472]	M5 ×	9 [0.354]	6 [0.236]	φ 11 [0.433] or less
16 [0.630]	0.8		7.5 [0.295]	φ 13 [0.512] or less
20 [0.787]	Rc1/8	11 [0.433]	10 [0.394]	φ 19 [0.748] or less
25 [0.984]		12 [0.472]		
32 [1.260]	Rc1/8	10 [0.394]	12 [0.472]	φ 19 [0.748] or less
40 [1.575]		14 [0.551]	13 [0.512]	φ 25 [0.984] or less
50 [1.969]	Rc1/4	10 [0.394]	15 [0.591]	φ 19 [0.748] or less
63 [2.480]			14 [0.551]	

Bore size	Port size	mm [in.]	
		Between-ports dimension P	Fitting outer diameter φ C
12 [0.472]	M5 ×	12 [0.472]	φ 11 [0.433] or less
16 [0.630]	0.8		
20 [0.787]			
25 [0.984]	Rc1/8	15 [0.591]	φ 14 [0.551] or less
32 [1.260]

50 [1.969]	Rc1/4	16 [0.630]	φ 15 [0.591] or less
63 [2.480]			

Caution: Apply sealants when re-using a block-off plug. Avoid getting sealant into the cylinder.

Precautions When Bottom Mounting

- Drill the guide rod escape hole when the stroke is 75mm or longer (except for SGDAK □ 12).
- When using as a stopper, etc., subject to shocks, the mounting screw's mating thread length should be as close to 2d as possible.

Bore size	A	B	C	φ D		Bolt E for mounting
				SGDA □	SGDA □ Q	
				Slide bearing	Rolling bearing	
12 [0.472]	51 [2.008]	18 [0.709]	42 [1.654]	10 [0.394]	8 [0.315]	M4 × 0.7
16 [0.630]	60 [2.362]	20 [0.787]	47 [1.850]	12 [0.472]	10 [0.394]	M5 × 0.8

Cylinder Thrust

Select a suitable cylinder bore size considering the load and air pressure to obtain the required thrust. Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio = $\frac{\text{Load}}{\text{Calculated value}}$) of 70% or less (50% or less for high speed application).

Allowable Range When Used as a Stopper

※ For product selection when the l dimension is longer, select one with a sufficient cylinder bore.

Precautions for handling

- Notes: 1. When using as a stopper, select product with a stroke of 50mm or less.
2. The rolling bearing type cannot be used as a stopper.
3. When the stopper becomes subject to friction force generated by friction between the carried object and the conveyor, etc., keep the friction force at the allowable lateral load or below.

**φ 12 [0.472in.] ~ φ 20 [0.787in.]
(Slide bearing)**

**φ 25 [0.984in.] ~ φ 63 [2.480in.]
(Slide bearing)**

- Notes: 1. Figures assume that the carried objects are plastic containers.
2. Figures for $\phi 12 \sim \phi 25$ are $st = 30$, and for $\phi 32 \sim \phi 63$ are $st = 50$.

1kg = 2.205lb. 1m/min. = 3.281ft./min.

Allowable Load Range

Use the graph values below for the relation between the load and piston speed. When these values are exceeded, install an external stopper.

φ 12 [0.472in.] ~ φ 25 [0.984in.]

φ 32 [1.260in.] ~ φ 63 [2.480in.]

1kg = 2.205lb. 1mm/s = 0.0394in./sec.

Allowable Range When Used as a Lifter

- Select a cylinder bore so that the total mass of the load is the theoretical output (in the graphs below) or less.

Bore size mm [in.]	Theoretical output
$\phi 12$ [0.472], $\phi 16$ [0.630]	40% or less
$\phi 20$ [0.787], $\phi 25$ [0.984]	50% or less
$\phi 32$ [1.260]~ $\phi 63$ [2.480]	60% or less

■ Slide bearing type (Applied pressure $P = 0.5\text{MPa}$ [73psi.])

- $\phi 12$ [0.472in.]
~ $\phi 25$ [0.984in.]
(50mm or shorter strokes)

- (75mm or longer strokes)

- $\phi 32$ [1.260in.]
~ $\phi 63$ [2.480in.]
(50mm or shorter strokes)

- (75mm or longer strokes)

1N = 0.2248lbf.
1mm = 0.0394in.

■ Rolling bearing type (applied pressure $P = 0.5\text{MPa}$ [73psi.])

- $\phi 12$ [0.472in.]
~ $\phi 25$ [0.984in.]
(50mm or shorter strokes)

- (75mm or longer strokes)

- $\phi 32$ [1.260in.]
~ $\phi 63$ [2.480in.]
(50mm or shorter strokes)

- (75mm or longer strokes)

1N = 0.2248lbf.
1mm = 0.0394in.

JIG CYLINDERS WITH GUIDES

Standard Cylinders $\phi 12 \sim \phi 63$

Bore Size and Stroke

Bore size	Standard strokes	Maximum available stroke
12	10, 20, 30, 40, 50, 75, 100	100
16		
20	10, 20, 30, 40, 50, 75, 100, 125, 150, 175, 200	200
25		
32		
40		
50		
63		

Remarks: 1. Non-standard strokes are available at 5mm intervals. Since the manufacturing method is collar packed, the total length, etc., are the same dimension as the next size up standard stroke cylinder.
2. For strokes of 75mm or longer, use long bushing type.

Order Codes for Standard Cylinder

● See the bore size and stroke on p.706.

● For the order codes of sensor switches only, see p.733.

Notes: 1. Not available in the rolling bearing type.
2. Not available in heat resistant specification.
3. For details of sensor switches, see p.733.

Inner Construction and Major Parts

■ Standard cylinder

● $\phi 12$

● $\phi 16$, $\phi 20$, $\phi 25$ *

● $\phi 32$, $\phi 40$ *

● $\phi 50$, $\phi 63$ *

* Same structure for the $\phi 16 \sim \phi 63$ rolling bearing type and scraper specification

Remark: The number of bearings for 50mm stroke or shorter is 1 bearing per shaft. At 75mm stroke or longer, 2 bearings per shaft. The plate, piston rod, and guide rod cannot be disassembled.

Specifications

Item	Bore size mm [in.]	12 [0.472]	16 [0.630]	20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	50 [1.969]	63 [2.480]
Operation type		Double acting type							
Media		Air							
Operating pressure range	MPa [psi.]	0.2～1.0 [29～145]			0.15～1.0 [22～145]				
Proof pressure	MPa [psi.]	1.5 [218]							
Operating temperature range	°C [°F]	0～60 [32～140]							
Operating speed range	mm/s [in./sec.]	100～500 [3.9～19.7]							
Cushion		Rubber bumper							
Lubrication		Not required (If lubrication is required, use Turbine Oil Class 1 [ISO VG32] or equivalent.)							
Port size		M5×0.8			Rc1/8			Rc1/4	
Stroke tolerance	mm [in.]	$\begin{smallmatrix} +1.5 & +0.059 \\ 0 & 0 \end{smallmatrix}$							
Maximum holding force (At end keep) ^{Note}	N [lbf.]	79.1 [17.8]	140.7 [31.6]	219.8 [49.4]	343.4 [77.2]	562.7 [126.5]	879.2 [197.6]	1373.8 [308.8]	2181 [490.3]
Backlash (At end keep)	mm [in.]	1.5 [0.059]			2.0 [0.079]				

Note: Durability at maximum holding force is 0.5million operations.

Bore Size and Stroke

Bore size	Standard strokes	Maximum available stroke
12	10, 20, 30, 40, 50, 75, 100	100
16		
20	10, 20, 30, 40, 50, 75, 100, 125, 150, 175, 200	200
25		
32		
40		
50		
63		

Remarks: 1. Non-standard strokes are available at 5mm intervals. Since the manufacturing method is collar packed, the total length, etc., are the same dimensions as the next size up standard stroke cylinder.
(Note that this cannot be applicable to rod side end keep)
2. For strokes of 75mm or longer, use long bushing type.

Inner Construction and Major Parts

■ End keep cylinder (Diagram is for $\phi 12$ [0.472in.].)

Remark: The number of bearings for 50mm stroke or shorter is 1 bearing per shaft. At 75mm stroke or longer, 2 bearings per shaft. The plate, piston rod, and guide rod cannot be disassembled.

Major Parts and Materials

No.	Parts	Bore mm	12	16	20	25	32	40	50	63
①	Cylinder body		Aluminum alloy (anodized)							
②	Head cover		Aluminum alloy (anodized)							
③	Rod cover		Aluminum alloy (special wear-resistant treatment)							
④	Slide bearing		Aluminum alloy (special wear-resistant treatment)							
⑤	Guide rod		Steel (hard chrome plated) (rolling bearing type: Steel)							
⑥	Piston seal		Synthetic rubber (NBR)							
⑦	Rod seal		Synthetic rubber (NBR)							
⑧	Magnet		Plastic magnet							
⑨	Piston		Aluminum alloy (special rust prevention treatment)							
⑩	Piston rod		Stainless steel (hard chrome plated)				Steel (hard chrome plated)			
⑪	Bumper		Synthetic rubber (NBR)							
⑫	O-ring (cylinder section)		Synthetic rubber (NBR)							
⑬	Support		Aluminum alloy (special rust prevention treatment)							
⑭	Plate		Aluminum alloy (black anodized)							
⑮	Bolt		Steel (nickel plated)							
⑯	Steel ball		Steel							
⑰	Plug		Mild steel (zinc plated)							
⑱	Snap ring		Steel (phosphate coating)							
⑲	Rolling bearing		Steel, plastic							
⑳	Lock guide		Aluminum alloy (anodized)							
㉑	Spring		Piano wire							
㉒	Lock piston		Stainless steel							
㉓	Lock piston seal		Synthetic rubber (NBR)							
㉔	O-ring (lock guide section)		Synthetic rubber (NBR)							
㉕	Lock end		Stainless steel (hard chrome plated)				Steel (zinc plated)

JIG CYLINDERS WITH GUIDES

Cylinders for Clean Systems $\phi 12 \sim \phi 63$

Symbol

Caution : If used when a lateral load is applied, or used as a lifter, load should be 20% or less of the standard type.

Specifications

Item	Bore size mm [in.]	12 [0.472]	16 [0.630]	20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	50 [1.969]	63 [2.480]
Operation type		Double acting type							
Media		Air							
Operating pressure range	MPa [psi.]	0.2~1.0 [29~145]			0.15~1.0 [22~145]				
Proof pressure	MPa [psi.]	1.5 [218]							
Operating temperature range	°C [°F]	0~60 [32~140]							
Operating speed range	mm/s [in./sec.]	100~300 [3.9~11.8]							
Cushion		Rubber bumper							
Lubrication		Prohibited							
Port size		M5×0.8			Rc1/8			Rc1/4	
Dust collection port size		M5×0.8							
Stroke tolerance	mm [in.]	$\begin{matrix} +1.5 \\ 0 \end{matrix} \begin{matrix} +0.059 \\ 0 \end{matrix}$							

Remark: Since plugs for connection ports in $\phi 20 \sim \phi 63$ are provided, care should be taken not to get sealant into the cylinder when assembling the plugs after applying sealant, etc.

Bore Size and Stroke

Bore size	Standard strokes	Maximum available stroke
12	10, 20, 30, 40, 50, 75, 100	100
16		
20	10, 20, 30, 40, 50, 75, 100, 125, 150, 175, 200	200
25		
32		
40		
50		
63		

Remarks: 1. Non-standard strokes are available at 5mm intervals. Since the manufacturing method is collar packed, the total length, etc., are the same dimensions as the next size up standard stroke cylinder.
2. For strokes of 75mm or longer, use long bushing type.

Order Codes for Cylinders for Clean Systems

Dust prevention specification		Sensor switch Note		Lead wire length				
P1 : Single seal (Vacuum type) P2 : Double seal (Relief type) Remark : P1 and P2 are compatible to class 5. Note: For details of sensor switches, see p.733.

Inner Construction and Major Parts

■ Cylinder for clean systems (Diagram shows $\phi 12$.)

Remark: The number of bearings for 50mm stroke or shorter is 1 bearing per shaft. At 75mm stroke or longer, 2 bearings per shaft. The plate, piston rod, and guide rod cannot be disassembled.

Major Parts and Materials

No.	Parts	Bore mm	12	16	20	25	32	40	50	63
①	Cylinder body		Aluminum alloy (anodized)							
②	Head cover		Aluminum alloy (anodized)							
③	Rod cover		Aluminum alloy (special wear-resistant treatment)							
④	Dust prevention cover		Aluminum alloy (anodized)							
⑤	Guide rod		Stainless steel							
⑥	Piston seal		Synthetic rubber (NBR)							
⑦	Rod seal		Synthetic rubber (NBR)							
⑧	Magnet		Plastic magnet							
⑨	Piston		Aluminum alloy (special rust prevention treatment)							
⑩	Piston rod		Stainless steel (hard chrome plated)							
⑪	Bumper		Synthetic rubber (NBR)							
⑫	O-ring		Synthetic rubber (NBR)							
⑬	Support		Aluminum alloy (special rust prevention treatment)							
⑭	Plate		Aluminum alloy (anodized)							
⑮	Bolt		Steel (nickel plated)				Stainless steel			
⑯	Steel ball		Stainless steel							
⑰	Plug		Brass (nickel plated)		Stainless steel (supplied at shipping for ϕ 20 ~ ϕ 63)					
⑱	Snap ring		Steel (phosphate coating)							
⑲	Collar		Aluminum alloy (special rust prevention treatment)							
⑳	Dust prevention seal		Synthetic rubber (NBR)							
㉑	Bolt		Stainless steel							
㉒	Rolling bearing		Steel, plastic (low level anti dust treatment)

		ZE202 — Reed switch type with indicator lamp		DC4.5V~28V	Vertical lead wire
				DC10V~28V	Horizontal lead wire
				AC85~115V	Horizontal lead wire
				DC10V~28V	Vertical lead wire
				AC85~115V	Vertical lead wire

● For details of sensor switches, see p.1544.

Minimum Cylinder Strokes When Using Sensor Switches

● Solid state type

Bore size mm [in.]	2 pcs. mounting ^{Note}		1 pc. mounting
	1-surface mounting	2-surface mounting	
12~63 [0.472~2.480]	10		5

Note: 2 pcs. mounting is possible at stroke 5mm.
Be aware, however, that overlapping may occur.

● Reed switch type

Bore size mm [in.]	2 pcs. mounting		1 pc. mounting
	1-surface mounting	2-surface mounting	
12~63 [0.472~2.480]	10		10

Moving Sensor Switch

- Loosening the mounting screw allows the sensor switch to be moved along the switch mounting groove on the cylinder body.
- Tighten the mounting screw with a tightening torque of 0.1~0.2N·m [0.9~1.8in·lbf].

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range: ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

● Solid state type

Item	Bore size	12 [0.472]	16 [0.630]	20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	50 [1.969]	63 [2.480]
Operating range: ℓ		2~4 [0.079~0.157]	2~5 [0.079~0.197]	3.5~7.5 [0.138~0.295]	4~8 [0.157~0.315]	3~7 [0.118~0.276]	3.5~7.5 [0.138~0.295]	3.5~7.5 [0.138~0.295]	4~8.5 [0.157~0.335]
Response differential: C		1.0 [0.039] or less							
Maximum sensing location ^{Note}		6 [0.236]							

Note: This is the length measured from the switch's opposite end side to lead wire.
Remark: The above table shows reference values.

● Reed switch type

● Reed switch type									mm [in.]
Item	Bore size	12 [0.472]	16 [0.630]	20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	50 [1.969]	63 [2.480]
Operating range: ℓ		5.5~8 [0.217~0.315]	6.5~9 [0.256~0.354]	10~13 [0.394~0.512]	11.5~15 [0.453~0.591]	9~11.5 [0.354~0.453]	10~13.5 [0.394~0.531]	10.5~14.5 [0.413~0.571]	11~15.5 [0.433~0.610]
Response differential: C		1.0 [0.039] or less	1.5 [0.059] or less						
Maximum sensing location ^{Note}		10 [0.394]							

Note: This is the length measured from the switch's opposite end side to lead wire.
Remark: The above table shows reference values.

When Mounting Cylinders with Sensor Switches in Close Proximity

When mounting cylinders in close proximity, install the cylinder so that it exceeds the values in the table below.

The end plates are the same side

Bore size	Solid state type		Reed switch type	
	A	B	A	B
12 [0.472]	33 [1.299]		28 [1.102]	
16 [0.630]	37 [1.457]	5 [0.197]	32 [1.260]	
20 [0.787]	45 [1.772]		40 [1.575]	
25 [0.984]	50 [1.969]		42 [1.654]	
32 [1.260]	56 [2.205]	8 [0.315]	48 [1.890]	
40 [1.575]	62 [2.441]		54 [2.126]	
50 [1.969]	78 [3.071]		66 [2.598]	
63 [2.480]	88 [3.465]	12 [0.472]	76 [2.992]	

The end plates are the opposite side

Bore size	Solid state type		Reed switch type	
	A	B	A	B
12 [0.472]	34 [1.339]		28 [1.102]	
16 [0.630]	38 [1.496]	6 [0.236]	32 [1.260]	
20 [0.787]	46 [1.811]		40 [1.575]

32 [1.260]	60 [2.362]	12 [0.472]	48 [1.890]	
40 [1.575]	66 [2.598]		54 [2.126]	
50 [1.969]	84 [3.307]		66 [2.598]	
63 [2.480]	94 [3.701]	18 [0.709]	76 [2.992]	

Mounting and Removing Sensor Switches

In Jig Cylinders with Guides of $\phi 12 \sim \phi 63$, be aware that sensor switches cannot be mounted or removed when strokes of 10mm or shorter mounted in the application shown below.

Bottom mounting

Right angled mounting
(2 surfaces and
3 surfaces)

※ For strokes of 20mm or longer, sensor switches can be mounted and removed when the plate (rods extend) is extended.

Mounting Location of End of Stroke Detection Sensor Switch

When the sensor switch is mounted in the locations shown below (the figures in the tables are reference values), the magnet comes to the maximum sensing location of the sensor switch at the end of the stroke.

● Standard cylinder

※ The scraper specification has a configuration of the standard cylinder body length +10mm [0.394in.], with the retracted side connection port location shifted 10mm [0.394in.] toward the head side.

When the sensor switch is mounted in the locations shown below (the figures in the tables are reference values), the magnet comes to the maximum sensing location of the sensor switch at the end of the stroke.

● Head side end keep cylinder

■ Solid state type

		mm [in.]							
Code	Bore size	12	16	20	25	32	40	50	63
		[0.472]	[0.630]	[0.787]	[0.984]	[1.260]	[1.575]	[1.969]	[2.480]
X		9.5 [0.374]	11 [0.433]	14 [0.551]	16 [0.630]	15 [0.591]	16.5 [0.650]	16.5 [0.650]	16.5 [0.650]
Y		23.5 [0.925]	24.5 [0.965]	30 [1.181]	30 [1.181]	33 [1.299]	35.5 [1.398]	48.5 [1.909]	48.5 [1.909]

Remark: A sensor switch cannot be mounted on surface A when the cylinder is St=10 and a head side end keep. (Can be mounted on surface B)

■ Reed switch type

		mm [in.]							
Code	Bore size	12	16	20	25	32	40	50	63
		[0.472]	[0.630]	[0.787]	[0.984]	[1.260]	[1.575]	[1.969]	[2.480]
X		5.5 [0.217]	7 [0.276]	10 [0.394]	12 [0.472]	11 [0.433]	12.5 [0.492]	12.5 [0.492]	12.5 [0.492]
Y		20 [0.787]	20 [0.787]	26 [1.024]	26 [1.024]	29 [1.142]	31.5 [1.240]	44.5 [1.752]	44.5 [1.752]

Remark: A sensor switch cannot be mounted on surface A when the cylinder is St=10 and a head side end keep. (Can be mounted on surface B)

Caution: As can be seen in the diagram to the right, when a sensor switch is mounted on a head side end keep cylinder (-HL), both the lead wires cannot be taken out on the head side. They can, however, be mounted on surface B.

Because the sensor switch interferes with the end keep function section.
